Articles

1. GDP and the Economy: Second Estimates for the Third Quarter of 2012

Real GDP growth picked up, rising 2.7 percent after rising 1.3 percent in the second quarter. Private inventory investment and federal government spending turned up, and residential investment picked up.

11. Government Receipts and Expenditures for the Third Quarter of 2012

Net government saving increased \$26.4 billion to -\$1,212.6 billion. Net federal government saving increased \$41.9 billion to -\$1,073.5 billion. Net state and local government saving decreased \$15.4 billion to -\$139.1 billion.

14. Annual Industry Accounts: Revised Statistics for 2009–2011

Real GDP by industry slowed in 2011, increasing 1.8 percent after increasing 2.4 percent in 2010. In 2011, 12 of the 22 major industry groups contributed to the slowdown.

Director's Message

In this issue, we present updated statistics from the Bureau of Economic Analysis (BEA) annual industry accounts, which detail interactions among industries and the contributions of industries to gross domestic product (GDP). In 2011, 12 of 22 major industry groups contributed to a slowdown in economic growth; real GDP rose 1.8 percent, compared with 2.4 percent in 2010. The leading contributors to the slower growth in 2011 were the retail trade and durable-goods manufacturing industries.

The article includes a note on the upcoming 2013 comprehensive revision of the industry accounts, which will include the 2007 benchmark input-output accounts fully integrated with the annual industry accounts. The comprehensive revision will also mark an important milestone in integrating the national economic accounts and the industry accounts. For more information, see page 22.

Elsewhere in this issue, we detail the second estimates of GDP for the third quarter of 2012. In addition, we offer a subject guide to material in the Survey of Current Business in 2012 and the BEA news release schedule for 2013.

As 2012 comes to close, we'd like to wish you good cheer for 2013. We look forward to bringing you more articles about BEA data and our ongoing efforts to enhance the data.

Happy holidays!

J. Steven Landefeld

Director, Bureau of Economic Analysis

Taking Account...

New guidance on citing BEA information available

Economists, researchers, students, and others have long used a wide range of statistics and other information from the Bureau of Economic Analysis (BEA) in their written work. As BEA's mission is to produce timely statistics that provide a more complete picture of the U.S. economy, the Bureau certainly encourages broad use of all of its statistics and other material.

To help people who wish to cite BEA information as part of their work, the agency has developed a concise online citation guide that offers specific guidance in citing the following:

- News releases
- The BEA blog
- Statistics from BEA's interactive data application
- The Survey of Current Business
- The regional input-out modelling system (RIMS II)
- •BEA's Frequently Asked Questions (FAQs) feature
- BEA papers, working papers, and other BEA publications

The online guide offers a generic template for footnotes and endnotes in most cases as well as numerous examples. The guide also offers some hints and tips for people who wish to reference BEA material in online publications. In addition, the guide provides BEA logos in various sizes for online use.

The information published by BEA on its Web site and in its

printed publications is in the public domain; it is not copyrighted material. Unless otherwise indicated, all information produced and distributed by BEA may be reproduced without specific permission.

The Bureau would like to remind all of its customers that as a federal entity, it does not endorse commercial products or services and asks that its information not be used in a way to create such an appearance.

The guide is available on the BEA Web site at www.bea.gov/about/BEAciting.htm.

Integrated macroeconomic statistics expanded

To help economists gain a better understanding of the economy, BEA publishes an integrated set of macroeconomic accounts that harmonizes the national income and product accounts (NIPAs) from BEA and the flow of funds accounts (FFAs) from the Federal Reserve Board.

These tables present a sequence of accounts that relate production, income and spending, capital formation, financial transactions, and asset revaluations to changes in net worth between balance sheets for the major sectors of the U.S. economy. These integrated accounts also bring the NIPAs and FFAs into closer accordance with the national accounting guidelines offered by the international community in the *System of National Accounts*.

The integrated accounts were

expanded this year to include quarterly estimates back to 1960. The accounts are available on the BEA Web site in the national economic accounts section.

Nominations for the 2013 Julius Shiskin Award

Nominations are being accepted for the 2013 Julius Shiskin Memorial Award for Economic Statistics. It is given in recognition of unusually original and important contributions in the development of economic statistics or in the use of statistics in interpreting the economy.

Contributions are accepted in the following areas: development of new statistical measures, statistical research, use of economic statistics to analyze and interpret economic activity, development of statistical tools, management of statistical programs, or application of data production techniques.

The Julius Shiskin Award is cosponsored by the Washington Statistical Society, the National Association for Business Economics, and the Business and Economics Statistics Section of the American Statistical Association.

It carries an honorarium of \$1,000, plus additional recognition from sponsors.

Awards nomination forms are available at www.amstat.org/sections/bus_econ/shiskin.html and are due on March 15, 2013. For more information, please contact Steven Paben at paben.steven@bls.gov.

December 2012

GDP and the Economy

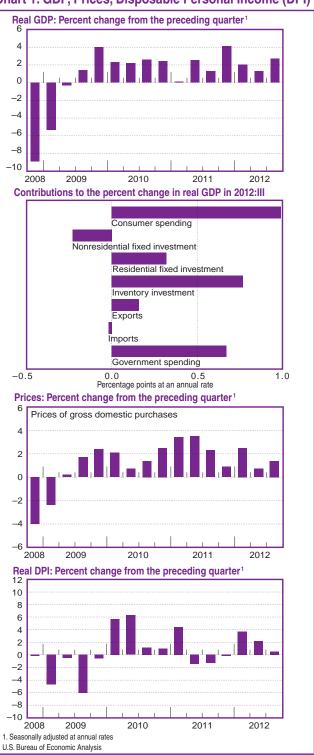

Second Estimates for the Third Quarter of 2012

REAL GROSS domestic product (GDP) increased at an annual rate of 2.7 percent in the third quarter of 2012, according to the second estimates of the national income and product accounts (NIPAs) (chart 1 and table 1). In the second quarter, real GDP increased 1.3 percent.

The second estimate of real GDP growth was revised up 0.7 percentage point from the advance estimate, reflecting upward revisions to inventory investment and to exports that were partly offset by downward revisions to consumer spending and to nonresidential fixed investment.²

- Prices of goods and services purchased by U.S. residents increased 1.4 percent in the third quarter after increasing 0.7 percent in the second quarter. Energy prices turned up in the third quarter, and food prices turned down. Excluding food and energy, gross domestic purchases prices increased 1.1 percent in the third quarter after increasing 1.4 percent.
- Real disposable personal income (DPI) increased 0.5 percent in the third quarter, 0.3 percentage point less than in the advance estimate, after increasing 2.2 percent (revised) in the second quarter. Current-dollar DPI increased 2.1 percent after increasing 2.9 percent (revised). The sharper deceleration in real DPI than in current-dollar DPI reflected an acceleration in the PCE implicit price deflator, which is used to deflate DPI. The deflator increased 1.6 percent in the third quarter after increasing 0.7 percent. The deceleration in third-quarter current-dollar DPI reflected a deceleration in personal income that was partly offset by a deceleration in personal current taxes.
- The personal saving rate, personal saving as a percentage of current-dollar DPI, was 3.6 percent in the third quarter, 0.1 percentage point less than in the advance estimate; in the second quarter, the rate was 3.8 percent (revised).
- Corporate profits increased \$67.3 billion in the third quarter after increasing \$21.8 billion.

Chart 1. GDP, Prices, Disposable Personal Income (DPI)

Shelly Smith prepared this article.

^{1. &}quot;Real" estimates are in chained (2005) dollars, and price indexes are chain-type measures. Each GDP estimate for a quarter (advance, second, and third) incorporates increasingly comprehensive and improved source data; for more information, see "Revisions to GDP, GDI, and Their Major Components" in the July 2011 SURVEY OF CURRENT BUSINESS. Quarterly estimates are expressed at seasonally adjusted annual rates, which assumes that a rate of activity for a quarter is maintained for a year.

^{2.} In this article, "inventory investment" refers to "change in private inventories," "consumer spending" refers to "personal consumption expenditures (PCE)," and "government spending" refers to "government consumption expenditures and gross investment."

| | | | | | | | | | | |

^{1.} The estimates under the contribution columns are also percent changes.

Consumer spending slowed in the third quarter, adding 0.99 percentage point to real GDP growth after adding 1.06 percentage points in the second quarter.

Nonresidential fixed investment turned down, subtracting 0.23 percentage point from real GDP growth after adding 0.36 percentage point (see page 4).

Residential fixed investment accelerated, adding 0.32 percentage point to real GDP growth after adding 0.19 percentage point (see page 4).

Inventory investment turned up, adding 0.77 percentage point to real GDP growth after subtracting 0.46 percentage point (see page 5).

Exports decelerated, contributing 0.16 percentage point to real GDP growth after adding 0.72 percentage point (see page 6).

Imports decelerated, subtracting 0.02 percentage point from real GDP growth after subtracting 0.49 percentage point (see page 6).

Federal government spending turned up, adding 0.71 percentage point to real GDP growth after subtracting 0.02 percentage point (see page 7).

State and local government spending decreased less, subtracting 0.04 percentage point from real GDP growth after subtracting 0.12 percentage point (see page 7).

Real final sales of domestic product, real GDP less inventory investment, accelerated slightly, increasing 1.9 percent after increasing 1.7 percent.

Motor vehicle output turned down, subtracting 0.24 percentage point from real GDP growth after adding 0.20 percentage point.

Final sales of computers turned up, adding 0.12 percentage point to real GDP growth after subtracting 0.10 percentage point.

Real gross domestic income, which measures the output of the economy as the costs incurred and the incomes earned in the production of GDP, increased 1.7 percent in the third quarter; in contrast, it decreased 0.7 percent (revised) in the second quarter.

^{1.} The estimates under the contribution columns are also percent changes.

Note. Percent changes are from NIPA table 1.1.1, contributions are from NIPA table 1.1.2, and shares are from NIPA table 1.1.10.

^{2.} GDI is deflated by the implicit price deflator for GDP. The third-quarter change reflects the incorporation of revised wage and salary estimates for the third quarter of 2012.

Note. For GDP and its components, percent changes are from NIPA table 1.2.1, contributions are from NIPA

table 1.2.2, and shares are calculated from NIPA table 1.2.5. For GDI, percent changes are from NIPA table 1.7.1.

- 1. The estimates under the contribution columns are also percent changes.
- 2. Gross operating expenses less primary sales to households.
- Net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
- 4. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
- Note. Percent changes are from NIPA table 2.3.1, and contributions, from NIPA table 2.3.2; shares are calculated from NIPA table 2.3.5.
- NPISHs Nonprofit institutions serving households

Consumer spending increased 1.4 percent in the third quarter after increasing 1.5 percent in the second quarter. The slight slowdown reflected a deceleration in spending for services that was mostly offset by an acceleration in spending for goods. Over the last 12 quarters, consumer spending has increased on average by about 2 percent.

In the third quarter, consumer spending for motor vehicles and parts turned up, reflecting upturns in spending on both new and used vehicles.

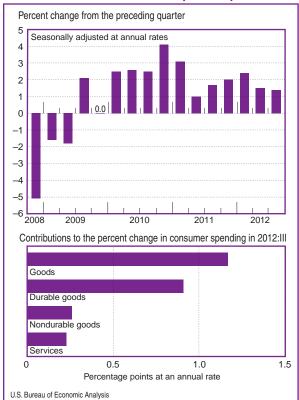

Consumer spending for clothing and footwear also turned up.

In contrast, spending for gasoline and other energy goods turned down, reflecting a downturn in spending for motor vehicle fuels.

Spending for housing and utilities slowed, reflecting a deceleration in spending for household utilities, notably for electricity and gas.

Financial services and insurance decreased more than in the second quarter, reflecting a downturn in consumer purchases of financial services.

1. The estimates under the contribution columns are also percent changes.

2. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

3. Excludes software "embedded," or bundled, in computers and other equipment.

4. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

6. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

Note. Percent changes are from NIPA table 5.3.1, contributions are from NIPA table 5.3.2, and shares are calculated from NIPA table 5.3.5.

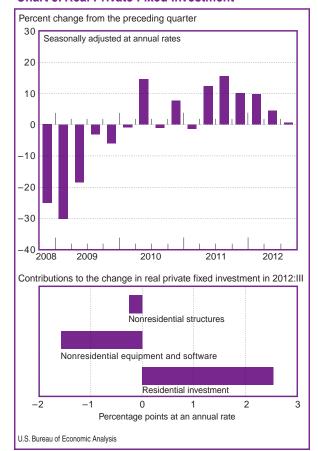

Private fixed investment increased 0.7 percent in the third quarter after increasing 4.5 percent in the second quarter. The slowdown reflected downturns in nonresidential fixed investment in equipment and software and in structures that were partly offset by a pickup in residential fixed investment.

Nonresidential structures fell 1.1 percent after increasing 0.6 percent. The downturn primarily reflected a downturn in manufacturing and a slowdown in "other" structures that were partly offset by a smaller decrease in power and communication and an upturn in mining exploration, shafts, and wells.

The downturn in equipment and software primarily reflected a downturn in transportation equipment (notably aircraft and light trucks) and a deceleration in industrial equipment.

Residential fixed investment increased 14.2 percent after increasing 8.5 percent. The pickup reflected an acceleration in single-family structures and an upturn in "other" structures (specifically, improvements) that were partly offset by a slowdown in multifamily structures. Residential investment has increased over 15 percent since its low point in the third quarter of 2010.

| Nonfarm inventories to final sales of goods and structures | | 3.92 | 3.90 | 3.91 | 3.93 | | | | | |

- 1. The levels are from NIPA table 5.6.6B.
- 2. The residual is the difference between the first line and the sum of the most detailed lines. 3. The ratios are from NIPA table 5.7.6B.

Note. The chained-dollar series are calculated as the period-to-period change in end-of-period inventories. Quarterly changes are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, chained-dollar estimates are usually not additive

Effects of the Summer Drought

This summer's drought adversely affected agricultural production in several Midwestern states. The NIPAs reflect the effects of the drought in several ways, but the largest effect was on BEA's estimates of farm inventory investment.

The farm inventory investment estimates reflect the continuing effects of the drought on farm production (particularly losses for corn and soybeans). Based on USDA farm statistics, BEA estimated that the drought reduced currentdollar farm inventory investment by about \$29 billion in the third quarter after reducing farm inventory investment by about \$12 billion in the second quarter. In the third quarter, total farm inventory investment subtracted 0.39 percentage point from real GDP growth after subtracting 0.17 percentage point in the second quarter.

For more details, including a discussion of income-side effects, see "Effects of the 2012 Midwest Drought on the NIPA Estimates" in the October 2012 Survey of Current BUSINESS.

Real inventory investment increased \$19.9 billion in the third quarter after decreasing \$15.5 billion in the second quarter. The upturn reflected upturns in manufacturing and wholesale trade industries that were partly offset by downturns in "other" industries and in retail trade industries and a larger decrease in farm.

The larger decrease in farm primarily reflected the effects of the drought (see the box).

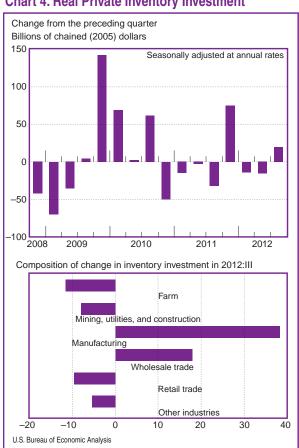

The upturn in manufacturing reflected an upturn in nondurable-goods industries and an acceleration in durable-goods industries.

The upturn in wholesale trade reflected an upturn in nondurable-goods industries that was partly offset by a downturn in durable-goods industries.

The downturn in retail trade reflected downturns in "other" retail trade, in general merchandise stores, and in motor vehicle and parts dealers that were partly offset by a smaller decrease in food and beverage stores.

The downturn in "other" industries reflected downturns in agricultural services, forestries, and fisheries and in transportation and warehousing.

^{1.} The estimates under the contribution columns are also percent changes.

Real exports of goods and services decelerated, reflecting a deceleration in exports of goods that was partly offset by an acceleration in exports of services.

The deceleration in goods exports reflected downturns in industrial supplies and materials (notably coal and petroleum products), in automotive vehicles, engines, and parts, and in nonautomotive consumer goods. In contrast, nonautomotive capital goods turned up, reflecting an upturn in civilian aircraft, engines, and parts.

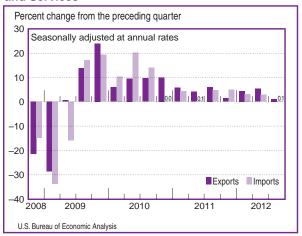

The acceleration in services exports primarily reflected an upturn in passenger fares and an acceleration in "other" private services.

Real imports of goods and services decelerated, reflecting a downturn in imports of goods that was partly offset by an acceleration in imports of services.

The downturn in goods imports reflected a downturn in nonautomotive capital goods and a deceleration in nonautomotive consumer goods that were partly offset by an acceleration in nonpetroleum industrial supplies and materials and an upturn in foods, feeds, and beverages.

The acceleration in services imports was driven primarily by an acceleration in royalties and license fees (reflecting payments associated with the broadcasting rights for the summer Olympic games) that was partly offset by a downturn in travel.

Chart 5. Real Exports and Imports of Goods and Services

^{2.} Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services.

^{3.} Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods. Note. Percent changes are from NIPA table 4.2.1, contributions are from NIPA table 4.2.2, and shares are

Note. Percent changes are from NIPA table 4.2.1, contributions are from NIPA table 4.2.2, and shares are calculated from NIPA table 4.2.5.

^{1.} The estimates under the contribution columns are also percent changes.

Note. Percent changes are from NIPA table 3.9.1, contributions from NIPA table 3.9.2, and shares are calcu-

lated from NIPA table 3.9.5.

Total government spending turned up. Both federal defense and nondefense spending turned up, and state and local spending decreased less in the third quarter than in the second quarter.

The large upturn in defense spending reflected an upturn in consumption expenditures (specifically, intermediate services purchased). In contrast, investment in defense equipment and software slowed.

The upturn in nondefense spending reflected an upturn in consumption expenditures (specifically, a downturn in government sales to other sectors).

The smaller decrease in state and local spending reflected an upturn in compensation that was partly offset by a downturn in investment in equipment and software and a larger decrease in investment in structures.

Government Spending

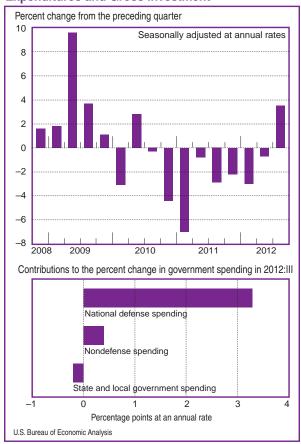

"Government consumption expenditures and gross investment," or "government spending," consists of two components: (1) consumption expenditures by federal government and by state and local governments and (2) gross investment by government and government-owned enterprises.

Government consumption expenditures consists of the goods and services that are produced by general government (less any sales to other sectors and investment goods produced by government itself). Governments generally provide services to the general public without charge. The value of government production—that is, government's gross output—is measured as spending for labor and for intermediate goods and services and a charge for consumption of fixed capital (which represents a partial measure of the services provided by government-owned fixed capital).

Gross investment consists of new and used structures (such as highways and dams) and of equipment and software purchased or produced by government and government-owned enterprises.

Government consumption expenditures and gross investment excludes current transactions of government-owned enterprises, current transfer payments, interest payments, subsidies, and transactions in financial assets and nonproduced assets, such as land.

The estimates under the contribution columns are also percent changes
 Nors. Most percent changes are from NIPA table 1.6.7; percent changes for PCE for food and energy goods
 and services and for PCE excluding food and energy are calculated from index numbers in NIPA table 2.3.4.
 Contributions are from NIPA table 1.6.8. GDP, export, and import prices are from NIPA table1.1.7.

Note on Prices

BEA's gross domestic purchases price index is the most comprehensive index of prices paid by U.S. residents for all goods and services, regardless of whether those goods and services were produced domestically or imported. It is derived from prices of consumer spending, private investment, and government spending.

The GDP price index measures the prices of goods and services produced in the United States, including the prices of goods and services produced for export.

The difference between the gross domestic purchases price index and the GDP price index reflects the differences between imports prices (included in the gross domestic purchases index) and exports prices (included in the GDP price index). For other measures that are affected by import and export prices, see the FAQ "How do the effects of dollar depreciation show up in the GDP accounts?" on BEA's Web site.

Prices paid by U.S. residents, as measured by the gross domestic purchases price index, accelerated in the third quarter. Excluding food and energy, prices slowed.

Consumer prices picked up. The pickup was more than accounted for by an upturn in prices for nondurable goods, mainly in prices paid for gasoline and other energy goods. Prices paid for consumer services slowed.

Prices paid for nonresidential fixed investment slowed, reflecting a slowdown in prices paid for structures.

Prices paid for residential fixed investment accelerated, increasing 2.9 percent after increasing 1.2 percent.

Prices paid by government picked up. A pickup in prices paid by state and local governments, mainly for petroleum and related goods, was partly offset by a slowdown in prices paid by the federal government.

Consumer prices excluding food and energy, a measure of the "core" rate of inflation, slowed, increasing 1.1 percent after increasing 1.7 percent.

The GDP price index increased 2.7 percent, 1.3 percentage points more than the increase in the price index for gross domestic purchases. The faster growth in the GDP price index than in the gross domestic purchases price index reflected a small increase in export prices (0.5 percent) relative to a larger decrease in import prices (6.5 percent).

^{1.} The estimates under the contribution columns are also percent changes.

Personal Income for the Second Quarter of 2012

With the release of the second estimates of GDP, BEA also releases revised estimates of various income-related measures for the previous quarter. This revision reflects the incorporation of second-quarter tabulations from the quarterly census of employment and wages from the Bureau of Labor Statistics.

Wage and salary disbursements increased \$23.3 billion, a downward revision of \$31.9 billion. Personal current taxes increased \$14.4 billion, a downward revision of \$5.8 billion. Contributions for government social insurance, which is subtracted in calculating personal income, increased \$1.8 billion, a downward revision of \$3.9 billion.

As a result of these revisions,

- Personal income increased \$99.9 billion, a downward revision of \$30.4 billion.
- Disposable personal income increased \$85.4 billion, a downward revision of \$24.6 billion.
- Personal saving increased \$28.0 billion, a downward revision of \$24.6 billion.
- The personal saving rate was 3.8 percent, a downward revision of 0.2 percentage point.

The second estimate of the third-quarter increase in real GDP was 0.7 percentage point, or \$21.9 billion, more than the advance estimate. The upward revision primarily reflected upward revisions to inventory investment and to exports that were partly offset by downward revisions to consumer spending and to nonresidential fixed investment.

The downward revision to consumer spending primarily reflected downward revisions to financial services, to electricity and gas services, and to motor vehicle fuels.

The downward revision to nonresidential investment reflected downward revisions to motor vehicles, to aircraft, to software, and to computers and peripheral equipment.

The upward revision to inventory investment reflected upward revisions to manufacturing, to wholesale trade, and to "other" industries.

The upward revision to exports was primarily to goods.

Major Source Data for the Second Estimates

Personal consumption expenditures: retail sales for July-September (revised). Motor vehicle registrations data for September (new). Energy Information Administration data for motor vehicle fuels, lubricants, and fluids for August (new), for retail electricity sales for August (new), and for natural gas usage for August (new). Securities and Exchange Commission FOCUS Report data for the third quarter (new), and Federal Reserve Board tabulations of commercial bank Call Report data for the third quarter (new).

Nonresidential fixed investment: construction spending (value put in place) for July and August (revised) and September (new). Manufacturers' shipments (M3) of machinery and equipment for August and September (revised). Exports and imports for July and August (revised) and September (new). Software company revenue reports for the third quarter (new). Motor vehicle registrations data for September (new).

Residential fixed investment: construction spending for July and August (revised) and September (new).

Change in private inventories: manufacturers' inventories for July-September (revised) and trade inventories for July and August (revised) and September (new). Census Bureau Quarterly Financial Reports for the third quarter (new).

Exports and imports: international transactions accounts for July and August (revised) and September (new).

Government consumption expenditures and gross investment: state and local construction spending for July and August (revised) and September (new).

Profits from current production increased \$67.3 billion, or 3.5 percent at a quarterly rate, in the third quarter after increasing \$21.8 billion, or 1.1 percent, in the second quarter.

Domestic profits of financial corporations increased \$71.3 billion, or 18.3 percent after decreasing \$39.7 billion, or 9.3 percent.

Domestic profits of nonfinancial corporations decreased \$1.0 billion, or 0.1 percent after increasing \$27.8 billion, or 2.6 percent.

Profits from the rest of the world decreased \$2.8 billion, or 0.7 percent, after increasing \$33.6 billion, or 8.4 percent. In the third quarter, receipts increased \$4.5 billion, and payments increased \$7.3 billion.

Taxes on corporate income increased \$19.3 billion, or 4.4 percent, after decreasing \$10.3 billion, or 2.3 percent.

Undistributed corporate profits, a measure of saving that equals after-tax profits less dividends, increased \$36.8 billion, or 5.0 percent, after increasing \$11.6 billion, or 1.6 percent.

Net cash flow from current production, a profits-related measure of internal funds available for investment, increased \$45.0 billion, or 2.4 percent, after increasing \$6.0 billion, or 0.3 percent.

Measuring Corporate Profits

Corporate profits is a widely followed economic indicator used to gauge corporate health, assess investment conditions, and analyze the effect on corporations of economic policies and conditions. In addition, corporate profits is an important component in key measures of income.

BEA's measure of corporate profits aims to capture the income earned by corporations from current production in a manner that is fully consistent with the national income and product accounts (NIPAs). The measure is defined as receipts arising from current production less associated expenses. Receipts exclude income in the form of dividends and capital gains, and expenses exclude bad debts, natural resource depletion, and capital losses.

Because direct estimates of NIPA-consistent corporate profits are unavailable, BEA derives these estimates in three steps.

First, BEA measures profits before taxes to reflect corporate income regardless of any redistributions of income through taxes. Estimates for the current quarter are based on corporate earnings reports from sources including Cen-

sus Bureau Quarterly Financial Reports, Federal Deposit Insurance Corporation call reports, other regulatory reports, and tabulations from corporate financial reports. The estimates are benchmarked to Internal Revenue Service data when the data are available for two reasons: the data are based on well-specified accounting definitions, and they are comprehensive, covering all incorporated businesses—publicly traded and privately held—in all industries.

Second, to remove the effects of price changes on inventories valued at historical cost and of tax accounting for inventory withdrawals, BEA adds an inventory valuation adjustment that values inventories at current cost.

Third, to remove the effects of tax accounting on depreciation, BEA adds a capital consumption adjustment (CCAdj). CCAdj is defined as the difference between capital consumption allowances (tax return depreciation) and consumption of fixed capital (the decline in the value of the stock of assets due to wear and tear, obsolescence, accidental damage, and aging).

December 2012

Government Receipts and Expenditures

Third Quarter of 2012

TET GOVERNMENT saving, the difference between current receipts and current expenditures of the federal government and state and local governments, was -\$1,212.6 billion in the third quarter of 2012, increasing \$26.4 billion from -\$1,239.0 billion in the second quarter of 2012.

Net federal government saving was -\$1,073.5 billion in the third quarter, increasing \$41.9 billion from -\$1,115.4 billion in the second quarter (see page 12). Current receipts turned up, and current expenditures turned down in the third quarter.

Net state and local government saving was -\$139.1 billion in the third quarter, decreasing \$15.4 billion from -\$123.7 billion in the second quarter (see page 13). Current receipts decelerated, and current expenditures accelerated in the third quarter.

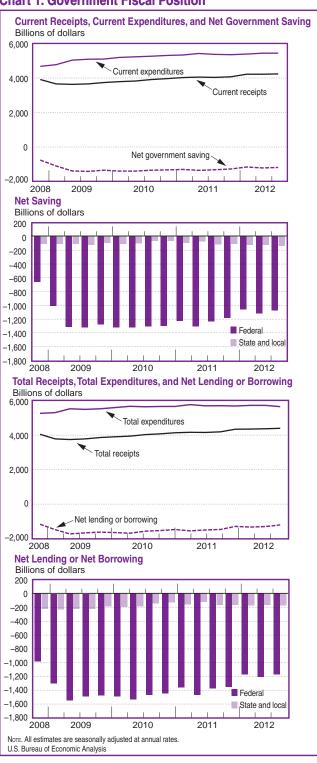

"Net lending or net borrowing (–)" is an alternative measure of the government fiscal position. Net borrowing is the financing requirement of the government sector, and it is derived as net government saving plus the consumption of fixed capital and net capital transfers received less gross investment and net purchases of nonproduced assets.

Net borrowing was \$1,344.8 billion in the third quarter, decreasing \$27.6 billion from \$1,372.4 billion in the second quarter. Federal government net borrowing was \$1,174.2 billion in the third quarter, decreasing \$38.2 billion from \$1,212.4 billion in the second quarter. State and local government net borrowing was \$170.6 billion, increasing \$10.6 billion from \$160.0 billion in the second quarter.

| Net lending or net borrowing (-) | -1,174.2 | 28.9 | 182.6 | -39.9 | 38.2 | | | |

Personal current taxes accelerated, reflecting an acceleration in withheld income taxes.

Taxes on corporate income turned up, reflecting an acceleration in corporate profits.

Contributions for government social insurance accelerated because of an acceleration in social security contributions.

Consumption expenditures turned up in the third quarter because of an upturn in national defense spending and an acceleration in nondefense spending.

Government social benefits to persons turned up in the third quarter as a result of an acceleration in Medicare benefits.

Grants-in-aid to state and local governments decelerated, reflecting a downturn in Medicaid grants.

Interest payments turned down because of a downturn in inflation expense payments on Treasury Inflation-Protected Securities.

Capital transfer payments turned up, reflecting the pattern of capital injected into Fannie Mae and Freddie Mac. No capital was injected in the third quarter after decreases in injections in the first and second quarters.

Federal Government Estimates

Estimates of federal government current receipts, current expenditures, and net federal government saving are based on data from the federal budget, from the *Monthly Treasury Statement* and other reports from the Department of the Treasury, and from other federal government agencies. Total receipts, total expenditures, and net lending or net borrowing, which are alternative measures of the federal fiscal position, are based on these same sources.

Quarterly and annual estimates are published monthly in NIPA table 3.2. Detailed annual estimates of these transactions by component are published annually in NIPA tables 3.4–3.8, 3.12, and 3.13. Detailed quarterly estimates are available at www.bea.gov; under "National" and "Supplemental Estimates," see "Underlying Detail Tables."

Each year, BEA translates the information in the federal budget into a NIPA framework.¹ For a historical time series of these estimates, see NIPA table 3.18B, which was published in the October 2012 Survey.

^{1.} See Mark S. Ludwick and Stan J. Bellotti, "NIPA Translation of the Fiscal Year 2013 Federal Budget," Survey of Current Business 92 (March 2012): 11–21.

| Net lending or net borrowing (–) | -170.6 | 2.6 | -8.3 | 6.6 | -10.6 |

Personal current taxes decelerated in the third quarter because of a deceleration in personal income taxes.

Taxes on production and imports turned down as a result of a larger decrease in sales taxes.

Federal grants-in-aid decelerated in the third quarter because of a downturn in Medicaid grants.

Consumption expenditures turned up in the third quarter, reflecting an acceleration in compensation of general government employees and an upturn in purchases of nondurable goods.

Government social benefits decelerated in the third quarter as a result of a deceleration in Medicaid benefits.

Gross government investment turned down in the third quarter because of a downturn in spending for structures.

Estimates of State and Local Government Receipts and Expenditures

The estimates of state and local government current receipts and expenditures and total receipts and expenditures are mainly based on compilations of data for state and local government finances. The Census Bureau produces the primary source data: the census of governments that is conducted in years that end in a 2 or a 7 and the Government Finances series of surveys for the other years. In addition, other sources of Census Bureau data are from the *Quarterly Summary of State and Local Government Tax Revenue* and the monthly *Value of Construction Put in Place*. Data sources from the Bureau of Labor Statistics include the Quarterly Census of Employment and Wages and the Employment Cost Index.

Quarterly and annual estimates are available monthly in NIPA table 3.3. Detailed annual estimates of state and local government transactions by component are available annually in NIPA tables 3.4–3.8, 3.12, and 3.13. Detailed quarterly estimates are available at www.bea.gov; under "National" and "Supplemental Estimates," see "Underlying Detail Tables." For a historical time series of reconciliations of the NIPA estimates with the Census Bureau data from Government Finances, see NIPA table 3.19.

BEA also prepares annual estimates of receipts and expenditures of state governments and of local governments.¹ These estimates are available annually in NIPA table 3.20 (state government receipts and expenditures) and in NIPA table 3.21 (local government receipts and expenditures); they were published in the October 2012 Survey.

^{1.} Bruce E. Baker, "Receipts and Expenditures of State Governments and of Local Governments," SURVEY 85 (October 2005): 5–10.

14 December 2012

Annual Industry Accounts

Revised Statistics for 2009–2011

By Patricia A. Washington, Jeff M. Bellone, Anna M. Jacobson, and Jennifer Lee

THE BUREAU of Economic Analysis (BEA) released revised statistics on real gross domestic product (GDP) by industry for 2009–2011 on November 13, 2012, reflecting the incorporation of newly available and revised source data. The revised statistics incorporate more accurate and more detailed information on the industry composition of GDP growth than was previously available for the advance 2011 statistics released on April 26, 2012.¹ In particular, these updated statistics incorporate revised and newly available Census Bureau annual survey data on industry output, Bureau of Labor Statistics (BLS) data on producer prices, and BEA statistics on GDP and related income measures from the 2012 annual revision of the national income and product accounts (NIPAs).² For in-

Real GDP growth slowed in 2011, increasing 1.8 percent after increasing 2.4 percent in 2010; 12 of 22 major industry groups contributed to the slowdown in real GDP. The leading contributors to the deceleration in U.S. economic growth were retail trade, followed by durable-goods manufacturing, according to revised statistics on the breakout of real GDP by industry. In contrast, professional, scientific, and technical services increased 5.4 percent in 2011 after increasing 2.6 percent in 2010.

Revised annual industry accounts statistics were compiled within an input-output framework that balances and reconciles industry production and commodity usages. The framework provides information on value added for 65 industries and commodities (see the "Methodology" on page 23). The previously published advance statistics for 2011 were developed from summary source data using an abbreviated methodology; value added was presented for 22 industry groups.

Chart 1. Annual Growth in Real GDP

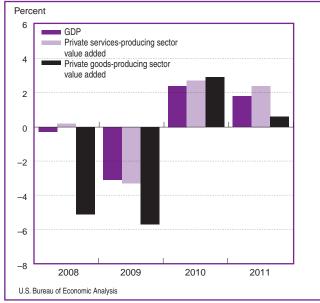

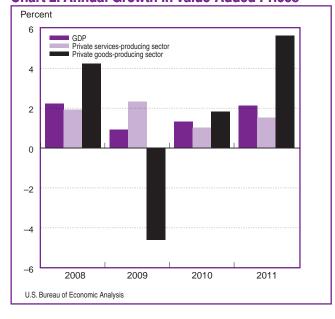

Chart 2. Annual Growth in Value-Added Prices

formation about the principal sources of data used, see tables F and G on pages 24–27.

Real GDP growth slowed in 2011, increasing 1.8

^{1.} See Donald D. Kim, Teresa L. Gilmore, and William A. Jolliff, "Annual Industry Accounts: Advance Statistics on GDP by Industry for 2011," Survey of Current Business 92 (May 2012): 6–22.

^{2.} See Eugene P. Seskin and Alyssa Holdren, "Annual Revision of the National Income and Product Accounts," SURVEY (August 2012): 6–31.

Highlights for 2011 include the following:

- Retail trade real value added increased 0.2 percent in 2011 after increasing 7.0 percent in 2010.
- Durable-goods manufacturing increased 6.8 percent after increasing 13.3 percent in 2010, primarily reflecting a slowdown in computer and electronic products manufacturing.
- •Nondurable-goods manufacturing turned down in 2011, decreasing 2.1 percent after increasing 0.4 percent in 2010; the downturn primarily reflected a downturn in food, beverage, and tobacco manufacturing.
- •GDP price growth accelerated in 2011, increasing 2.1 percent after increasing 1.3 percent in 2010. Nondurable-goods manufacturing and retail trade were the largest contributors to the acceleration.

Data Availability

The annual tables for GDP by industry and the inputoutput (I-O) accounts are available on BEA's Web site. For the GDP by industry accounts, online tools are available for users to customize the tables so that they show data only for the industries and years of interest. Tools are also available for creating graphs of data and downloading tables to update spreadsheets.

For the I-O tables, online tools are available for users to create and store unique levels of aggregation of data for specific commodities and industries. Tools are also available for viewing and downloading entire I-O tables, including the "make" and "use" tables.

For a guide to the annual industry accounts, see "A Primer on BEA's Industry Accounts" in the June 2009 SURVEY OF CURRENT BUSINESS.

Acknowledgments

Erich H. Strassner, Chief of the Industry Applications Division (IAD), and David B. Wasshausen, Chief of the Industry Sector Division (ISD), supervised the preparation of the statistics. Carol E. Moylan, Associate Director for Industry Economic Accounts, provided overall guidance. Thomas F. Howells III, Chief of the Input-Output Statistics Branch in IAD, managed the economic information systems used to produce and review the statistics. The following staff provided guidance and contributed to the preparation of the industry statistics and analysis: Paul V. Kern, Chief of the Information and Business Services Branch in ISD, Edward T. Morgan, Chief of the Inter-Industry Statistics Branch in IAD, Kevin J. Muck, Chief of the Goods and Distributive Services Branch in ISD, and Patricia A. Washington, Chief of the Personal Services and Government Branch in ISD, Robert J. McCahill, Program Coordinator in ISD, Maxine V. Tiggle and Pat A. Wilkinson provided administrative and program assistance.

The following staff also contributed to the preparation of the annual statistics:

Agriculture, mining, construction, and manufacturing: Matthew M. Donahoe, Aaron A. Elrod, Donald D. Kim, Mariana Matias, and Simon N. Randrianarivelo.

Distributive services: Ricky L. Stewart, Anna M. Jacobson, Patrick H. Martin, and Justin H. Settles.

Information and professional services: Robert J. Corea, Olympia Belay, and Mandy C. Roberts.

Finance, insurance, real estate, rental and leasing, and management services: Matthew B. Schroeder, James M. Green, Lolita V. Jamison, Erin M. Ludlow, and Ricci L. Reber.

Transportation: William H. Nicolls.

Education, government services and other services: Tameka R. L. Harris, Darlene C. Robinson-Smith.

Government enterprises, arts, entertainment, accommodation and food services, and health services: Daniel W. Jackson, and Alex Eisenmann.

Value added and research and development: Jennifer Lee, Teresa L. Gilmore, William A. Jolliff, and Brian M. Lindberg.

International trade and inventory: Matthew Russell, Peter D. Kuhbach, Gregory R. Linder, and Sarah B. Osborne.

Balancing, Reconciliation, and Operations: Amanda S. Lyndaker, Ahmad Z. Yusuf, Gabriel W. Medeiros, Jeffrey M. Bellone, Rajeshwari R. Bhosale, Kathleen M. Karlon, Douglas B. Leung, and Jeffrey A. Young.

Travel and Tourism Satellite Account: Paul V. Kern, Steven L. Zemanek.

Real GDP increased 1.8 percent in 2011, reflecting increases in 15 of the 22 major industry groups. Durable-goods manufacturing and "professional, scientific, and technical services were the leading contributors to growth.

Agriculture, forestry, fishing, and hunting declined 13.6 percent, the largest decline among the 22 major industry groups.

Mining growth was flat after declining 9.2 percent, primarily reflecting a smaller decrease in the oil and gas extraction industry in 2011 after exhibiting a large decrease in 2010.

Construction declined for the 8th consecutive year. The 0.3 percent decrease in 2011 was the smallest drop since 2004.

Durable-goods manufacturing increased 6.8 percent, reflecting strong growth in the "motor vehicles, bodies and trailers, and parts manufacturing" and machinery manufacturing industries.

Nondurable-goods manufacturing decreased 2.1 percent, primarily reflecting a decrease in the petroleum and coal products manufacturing industry.

Transportation and warehousing rose 4.8 percent after increasing 6.6 percent. Growth in 2011 was widespread within the sector.

Management of companies declined 0.5 percent after decreasing 4.8 percent, marking the second consecutive annual decline.

Federal government declined 0.3 percent after increasing 2.9 percent. The decrease reflected a 10.9 percent drop in real value added for federal government enterprises.

Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.
 Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

Real Value Added

^{1.} The estimates of gross domestic product under the contributions columns are percent changes.

The slowdown in real GDP growth in 2011 was primarily due to a deceleration in both retail trade and durable-goods manufacturing. Overall, 12 of 22 industry groups contributed to the slowdown.

Utilities accounted for about one-fifth of the slow-down in real GDP, contributing 0.05 percentage point to real GDP after contributing 0.19 percentage point in 2010.

Durable-goods manufacturing slowed, contributing 0.40 percentage point to the increase in real GDP after contributing 0.73 percentage point in 2010. The leading contributor to the slowdown was computer and electronic product manufacturing, which contributed 0.02 percentage point after contributing 0.26 percentage point.

Nondurable-goods manufacturing turned down. The leading contributor to the downturn was the "food and beverage and tobacco product manufacturing" industry.

Retail trade was the leading contributor to the slow-down in real GDP growth. Retail trade increased 0.2 percent and contributed 0.01 percentage point to real GDP after increasing 7.0 percent and contributing 0.42 percentage point.

Information services accelerated, contributing 0.25 percentage point to real GDP growth after contributing 0.13 percentage point. The acceleration primarily reflected an acceleration in the broadcasting and telecommunications industry.

Professional, scientific, and technical services accelerated, primarily reflecting an acceleration in the "miscellaneous professional, scientific, and technical services" industry, which includes "accounting and payroll services" and "management, scientific, and technical consulting services."

Federal government turned down, primarily reflecting a notable slowdown in real value added for federal general government.

Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.
 Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

^{4.} Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.
Note. Percentage-point contributions do not sum to the percent change in real gross domestic product because

Note. Percentage-point contributions do not sum to the percent change in real gross domestic product because the contribution of the "Not allocated by industry" line is excluded.

Value-Added Prices

| Private services-producing industries ² | 1.9 | 2.3 | 1.0 | 1.5 |
| Information-communications-technology-producing industries ³ | -3.9 | -0.8 | -3.2 | -2.2 |

Growth in the GDP price index accelerated in 2011, primarily reflecting an acceleration in value-added prices for nondurable-goods manufacturing and an upturn in value-added prices for retail trade.

Value-added prices for agriculture, forestry, fishing, and hunting accelerated, rising 27.4 percent after rising 13.9 percent, reflecting accelerations in crop prices.

Value-added prices for mining decelerated, increasing 15.1 percent after increasing 25.0 percent in 2010, reflecting a deceleration in the value-added prices for the oil and gas extraction industry.

Value-added prices for construction turned up, increasing 1.5 percent after falling 2.5 percent. Valueadded prices for the construction industry have risen in 18 of the last 19 years.

Value-added prices for nondurable goods manufacturing accelerated, rising 9.8 percent after rising 1.0 percent; the pickup primarily reflected an acceleration in the value-added price for the petroleum and coal product manufacturing industry.

Value-added prices for retail trade turned up, increasing 3.2 percent after falling 3.3 percent, primarily reflecting an upturn in retail margin prices.

Value-added prices for finance and insurance increased 0.8 percent after increasing 8.2 percent. The deceleration reflected a downturn in value-added prices for the "Federal Reserve banks, credit intermediation, and related activities" industry.

Value-added prices for real estate and rental and leasing turned up, increasing 0.9 percent after falling 1.1 percent, primarily reflecting an upturn in value-added prices for real estate.

Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.
 Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services,

except government.

3. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

Annual revisions incorporate source data that are more complete, more detailed, and otherwise more reliable than those previously available. Revisions primarily reflect the incorporation of newly available and revised annual source data (for example, Census' Annual Survey of Manufactures (ASM) and the Internal Revenue Service Statistics of Income (SOI)). Compared to the previously published statistics, the overall picture of the economy for 2009-2011 did not change.

Revisions to real value added reflect revisions to real gross output and real intermediate inputs. Table E presents revisions to percent change for real gross output, real intermediate inputs, and real value added by industry group. This table has been added to this article, as well as the November 13, 2012, news release, in order to better illustrate the relationship among these three measures. In most instances, changes in real value added are largely consistent with changes in real gross output.

2009

In 2009, the direction of growth in real value added was unchanged for 21 of the 22 industry groups. All of the top five contributors to the larger decrease in real GDP

remained in the top five. Both private services and private goods-producing industries were revised up.

19

- The upward revision to real value added for nondurable-goods manufacturing primarily reflected an upward revision to current-dollar value added and to current-dollar gross output for the "food and beverage and tobacco products manufacturing" industry. The revision to value added reflected an upward revision to profits before tax, which reflected the incorporation of revised SOI data. The revision to gross output reflected the incorporation of revised shipments data from the ASM.
- The upward revision to real value added for finance and insurance primarily reflected an upward revision to current-dollar value added for the insurance carriers and related activities industry. This reflected an upward revision to corporate net interest, which in turn reflected the incorporation of revised SOI data.

2010

In 2010, the direction of growth in real value added was unchanged for 19 of the 22 industry groups. Nine of the top 10 contributors to the upturn in real GDP remained

Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.
 Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information.

finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food

services; and other services, except government.

3. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

in the top 10, while six of the top 10 contributors to the increase in real GDP remained in the top 10. Both private goods-producing and private services-producing industries were revised down.

- The downward revision to finance and insurance was widespread within the industry group; the leading contributor to the revision was the insurance carriers and related activities industry. The revision to the insurance carriers and related activities industry reflected a downward revision to current-dollar value added; the revision to current-dollar value added reflected a revision to corporate net interest, which resulted from the incorporation of newly available SOI data that replaced projections based primarily on the Federal Reserve Board's flow of funds statistics.
- The downward revision to nondurable-goods manufacturing primarily reflected a downward revision to current-dollar value added and to current-dollar gross output for the petroleum and coal products industry. The downward revision to current-dollar value added reflected a downward revision to corporate profits,
- resulting from the incorporation of newly available SOI data, which replaced data from the Census Bureau's Quarterly Financial Report (QFR). The downward revision to current-dollar gross output reflected the incorporation of newly available shipments data from the ASM, which replaced a composite indicator based on data on refined petroleum and coal products from the Energy Information Administration (EIA) and price indexes from the BLS.
- The downward revision to durable-goods manufacturing primarily reflected a downward revision to current-dollar value added and to current-dollar gross output for the computer and electronic products manufacturing industry. The downward revision to current-dollar value added reflected a downward revision to profits before tax, reflecting the incorporation of newly available SOI data, which replaced data from the QFR. The downward revision to nominal gross output reflected the incorporation of newly available ASM shipments data, which replaced a composite indicator based on data from the Census Bureau's

Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.
 Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food

services; and other services, except government.

3. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services

Manufacturers' Shipments, Inventories, and Orders (M3) and from the Federal Reserve Board's Industrial Production Indexes.

• The upward revision to real estate and rental and leasing primarily reflected upward revisions to nominal gross output and to current-dollar value added for real estate. The current-dollar gross output revision is due to the incorporation of newly available SOI data on corporate receipts for rents paid. The upward revision to value added was primarily attributed to upward revisions to noncorporate net interest and proprietors' income. The revision to noncorporate net interest reflected the incorporation of newly available SOI data, which replaced projections based primarily on the Federal Reserve Board's flow of funds statistics. The revision to proprietors' income reflected the incorporation of newly available SOI data, which replaced real estate brokers' commissions.

2011

In 2011, the direction of growth in real value added was unchanged for 14 of 22 industry groups. Four of the top five contributors to the deceleration in real GDP remained in the top five, while seven of the top 10 contributors to the increase in real GDP remained in the top 10. An upward revision to private services-producing industries was partly offset by a downward revision to private goods-producing industries.

- The upward revision to real estate, rental, and leasing primarily reflected an upward revision to current-dollar value added for the real estate industry due to the incorporation of revised data on owner-occupied housing.
- The upward revision to utilities primarily reflected an upward revision to current-dollar value added, which in turn reflected an upward revision to corporate capital consumption allowances.
- The upward revision to transportation and warehousing primarily reflected upward revisions to intermediate input prices, which increased at a faster rate than was projected in the advance release of GDP by industry.
- The downward revision to finance and insurance primarily reflected downward revisions to the "Federal Reserve Banks, credit intermediation, and related services" industry and to the securities and commodity contracts industry. The downward revision to the "Federal Reserve Banks, credit intermediation, and related services" industry primarily reflected a downward revision to current-dollar value added, which in turn reflected a downward revision to corporate net

- interest. The downward revision to the securities and commodity contracts industry reflected the combination of a downward revision to nominal gross output and an upward revision to the gross output price index. The revision to nominal gross output reflected the incorporation of newly available SAS data, which replaced data from the Census Quarterly Services Survey. The revision to the gross output price index reflected the incorporation of a more complete set of price data than was available for the advance release.
- The downward revision to durable-goods manufacturing primarily reflected a downward revision to current-dollar value added for the computer and electronic products manufacturing industry. This revision reflected a downward revision to profits before tax resulting from the incorporation of revised data from the OFR.
- The downward revision to mining primarily reflected downward revisions to current-dollar value added for the oil and gas extraction industry and the support activities for mining industry. This reflected a downward revision to profits before tax, reflecting the incorporation of revised data from the QFR.

Improvements

These estimates reflect a number of improvements in the source data and are consistent with the results of the annual revision of the national income and product accounts. The improvements did not meaningfully alter the overall picture of the economy in 2009–2011. These improvements include the following:

- Expanded use of the Census Bureau Service Annual Survey (SAS) revenue data to measure gross output for urban transit systems, for transit and ground passenger transportation, and for pipeline transportation. The SAS data replace a variety of composite indicators, including BEA data on personal consumption expenditures (PCE), and data from the American Public Transit Ridership Association, Energy Information Administration (EIA), and Federal Energy Regulatory Commission.
- Introduced EIA data to measure gross output for federal utilities, which replaced data collected from annual reports.
- Introduced Bureau of Labor Statistics producer price indexes for measuring gross output prices for air transportation's domestic and international scheduled air services, which replaced a PCE price index for general transportation fares.

A Note on the Upcoming 2013 Comprehensive Revision of the Industry Accounts

In 2013, BEA will release the 2007 benchmark input-out-put (I-O) accounts fully, which will be integrated with the time series of annual industry accounts, as part of the 2013 comprehensive revision of the industry accounts. The benchmark I-O accounts, which are released approximately every 5 years, provide the most comprehensive information available on the production of goods and services (commodities) by industries and the flow of these goods and services (1) to industries for use in their production processes and (2) to final users in the economy. These accounts are based on data from the economic census and are used to establish the level of gross domestic product (GDP) for the benchmark year and to provide critical information for estimating GDP for periods after the benchmark year.

This release will be the next step in BEA's continuing efforts to better integrate the national and industry accounts. Traditionally, the benchmark I-O accounts have been released before the comprehensive revision of the National Income and Product Accounts (NIPAs), and as a consequence, they have not been fully consistent with the NIPAs and with the annual industry accounts. With this comprehensive revision, the benchmark I-O accounts will

be released after the NIPA comprehensive revision and will be fully integrated with the NIPAs and the annual industry accounts. Beginning with the 2007 benchmark I-O accounts, the benchmark I-O accounts will be revised to reflect revisions to the NIPAs and to the annual industry accounts.

The benchmark I-O accounts will continue to be a critical source of information to benchmark the NIPAs and the annual industry accounts. The enhanced integration will allow for a higher degree of consistency among the NIPAs, the benchmark I-O accounts, and the annual industry accounts.

The 2013 comprehensive revision will also include five major improvements recommended by the *System of National Accounts*, 2008.² These major improvements include the following: treating research and development expenditures and production costs for entertainment, literary, and artistic originals as investment in the calculation of GDP; adopting accrual accounting for defined benefit pension plans; improving the treatment of borrowers' and depositors' services; and classifying additional ownership transfer costs as investment.

^{2.} See Seskin and Holdren 2012.

Methodology for Annual Revisions

The annual input-output (I-O) accounts and the GDP by industry accounts are created using an integrated methodology that makes the annual estimates of gross output, intermediate inputs, and value added by industry more timely and more consistent than previously published estimates.¹ Industry estimates are published for 65 detailed industries that are based on the 2002 North American Industry Classification System (NAICS). Commodity estimates are published at the same level of detail as the industry estimates. Estimates of final uses and value added are also included in the annual estimates. The integrated methodology is applied at a finer level of industry and commodity detail than the previous methodologies in order to enhance the accuracy of aggregate-level estimates.

The integrated annual I-O accounts and GDP by industry accounts are prepared in five steps:

Step one. Industry estimates of current-dollar value added for 2009-2011 are extrapolated forward from the annual industry accounts estimates for 2008 using the percent changes in the annual estimates of gross domestic income (GDI) from the national income and product accounts (NIPAs). The GDI by industry estimates consist of compensation of employees, taxes on production and imports less subsidies, and gross operating surplus. Additionally, corporate data on profits before tax, net interest, and capital consumption allowances are converted from an enterprise basis to an establishment basis using data on employment. Finally, the statistical discrepancy (the difference between GDP and GDI) is distributed among the industries. In general, annual revisions to the industry estimates of value added largely reflect revisions to the components of GDI and to the statistical discrepancy from the annual NIPA revision.

Step two. Industry estimates of gross domestic output for 2009–2011 are extrapolated from the 2008 estimates. The extrapolators for these estimates are prepared using a wide array of source data, including surveys from the Census Bureau, the Bureau of Labor Statistics, and other public and private sources.² Annual revisions to industry

estimates of gross output are due to revisions in these source data.

Step three. The initial commodity composition of intermediate inputs for 2009–2010 is calculated for each industry by a process that uses the previously published intermediate input estimates and Census Bureau data on broad business expense categories by industry. In order to calculate the composition for 2011, the previously published intermediate input estimates are used from 2010. As a final step, the commodity mix of detailed intermediate inputs for all years is updated to be consistent with business expense data from the Census Bureau's Service Annual Survey and Annual Survey of Manufactures.

Step four. The initial commodity composition of each GDP expenditure component for 2009–2010 is prepared using previously published expenditure estimates. In order to calculate the composition for 2011, the previously published expenditure estimates are used from 2010. The annual I-O use tables are then balanced using a biproportional adjustment procedure to ensure that intermediate and final use of commodities is consistent with domestic supply, that intermediate use and value added are consistent with gross output and value added, and that final use is consistent with the final expenditure components from the NIPAs. The current-dollar measures of gross output, intermediate inputs, and value added are then incorporated into the GDP by industry accounts

Step five. Price and quantity indexes for the GDP by industry accounts are prepared in three steps. First, indexes are derived for gross output by deflating each commodity produced by an industry that is included as part of its gross output. Second, indexes for intermediate inputs are derived by deflating all commodities that are consumed by an industry as intermediate inputs in the annual I-O use tables. Third, indexes for valued added by industry are calculated using the double-deflation method in which real value added is computed as the difference between real gross output and real intermediate inputs.³

^{1.} See Nicole M. Mayerhauser and Erich H. Strassner, "Preview of the Comprehensive Revision of the Annual Industry Accounts," Survey of Current Business 90 (March 2010): 21–34.

^{2.} See table F on pages 24–25. The estimates of the commodity composition of extrapolated industry gross output are largely consistent with the 2002 benchmark I-O relationships for nonmanufacturing industries and with most recent survey data for manufacturing industries.

^{3.} Estimates of gross output and intermediate inputs are combined in a Fisher index-number formula in order to generate the indexes for value added by industry. This method is preferred because it requires the fewest assumptions about the relationships between gross output by industry and intermediate inputs by industry.

F. Principal Sources of Data for Industry and Commodity Output and Prices—Continues

| Industry and commodity | Source data for annual current-dollar statistics | Source data for price indexes |
|-------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Agriculture, forestry, fishing and | hunting | |
| Farms Forestry, fishing and related activities | New U.S. Department of Agriculture (USDA) data and national income and product account (NIPA) farm output for 2011, revised data for 2009 and 2010. For forestry, new NIPA farm output for 2011 and revised data for 2009 and 2010; for logging and forestry support activities, Census Bureau annual survey of manufactures (ASM) for 2009 and 2010, Census Bureau manufacturers' shipments, inventories, and orders survey (M3) data for 2011; for fishing, hunting and trapping, National Oceanic and Atmospheric Administration commercial landings and export value for 2009–2011. | USDA prices received by farmer; Bureau of Labor Statistics (BLS) Producer Price Index (PPI). BLS PPI; NIPA personal consumption expenditure (PCE) implicit price indexes; USDA/National Agricultural Statistics Service unit prices. |
| Mining | 3 | |
| Oil and gas extraction | U.S. Department of Energy Information Administration (EIA) data on quantities produced and prices for 2009–2011. | BLS PPI and EIA. |
| Mining, except oil and gas | For coal mining, EIA U.S. Coal Supply and Demand in Review; for Uranium, EIA <i>Uranium Marketing Annual Report</i> , for all other, U.S. Geological Survey (USGS) <i>Mineral Commodity Summaries</i> for 2009–2011. | EIA; USGS and BLS PPI. |
| Support activities for mining | For mining exploration, trade source data on drilling costs and footage drilled for 2009–2011; all other support activities, USGS <i>Mineral Commodity Summaries</i> for 2009–2011. | EIA, USGS, BLS PPI, and trade sources. |
| Utilities | For power generation and supply, EIA forms 861 and 826; for natural gas distribution, new data for 2011 and revised data for 2009 and 2010 from EIA <i>Natural Gas Monthly;</i> for water, sewage and other systems, NIPA PCE water and sanitary services/maintenance for 2009–2011 | BLS Consumer Price Index (CPI) and BLS PPI. |
| Construction Residential | New Census Bureau construction spending survey data for 2011 and revised data for 2009 and 2010. | Census Bureau price deflator for new single-family houses under construction; BEA price index for multifamily home construction. |
| Nonresidential | New Census Bureau construction spending survey data for 2011 and revised data for 2009 and 2010; U.S. Department of Defense (DOD) expenditures; USDA expenditures. | BEA composite price indexes based on cost per square foot and on cost indexes from trade source data and Census Bureau price deflator for single-family houses under construction; BLS PPI. |
| Manufacturing | Shipments and inventories data from Census Bureau M3 for 2011 and ASM and Census Bureau nonemployer survey data for 2009 and 2010. | BLS PPI; NIPA price indexes based on DOD prices paid for military equipment; NIPA hedonic price indexes. |
| Wholesale trade | Census Bureau monthly wholesale trade survey for 2011 and Census Bureau annual wholesale trade survey data for 2009 and 2010. | BLS PPI and NIPA sales deflators. |
| Retail trade | Census Bureau monthly retail trade survey for 2009; Census Bureau annual retail trade survey (ARTS) data for 2009 and 2010. | BLS PPI and NIPA sales deflators. |
| Transportation and warehousing | ı | l |
| Air transportation | New Bureau of Transportation Statistics (BTS) Air Carrier Financial Statistics (ACFS) and Air Carrier Traffic Statistics (ACTS); and foreign trade statistics. | BLS PPI. |
| Rail transportation | For rail passenger, Amtrak Annual Report 2009; for rail freight, Department of Transportation (DOT) Surface Transportation Board earnings data. | BLS PPI. |
| Water transportation | For freight and passenger transportation except deep sea transportation, Census Bureau pre- liminary services annual survey (SAS) data for 2011 and revised SAS data for 2009 and 2010; for freight transportation, BLS quarterly census of employment and wages (QCEW) data; for deep sea passenger transportation, NIPA PCE. | For freight, BLS PPI; for passenger, BLS CPI. |
| Truck transportation | Census Bureau preliminary SAS data for 2011 and revised SAS data for 2009 and 2010. | BLS PPI. |
| Transit and ground passenger transportation | BLS quarterly census of employment and wages (QCEW) data; PCE for ground passenger transportation for 2009–2011; Census Bureau preliminary SAS data for 2011 and revised SAS data for 2010. | PCE price indexes; QCEW data; BLS PPI. |
| Pipeline transportation | Census Bureau preliminary SAS data for 2011 and revised SAS data for 2010; trade source data on receipts; Federal Energy Regulatory Commission oil pipeline index; EIA natural gas annual report for 2009. | BLS PPI. |
| Other transportation and support activities | BTS ACFS, DOT Surface Transportation Board, American Public Transportation Association, BLS QCEW, NIPA PCE, Census Bureau SAS data, and trade source data for receipts. | PCE; BLS PPI. |
| Warehousing and storage | Census Bureau preliminary SAS data for 2011 and revised SAS data for 2009 and 2010. | BLS PPI. |
| Information Publishing industries (includes software) | Census Bureau preliminary SAS data for 2011 and revised SAS data for 2009 and 2010. | BEA price index for software; BLS PPI. |
| Motion picture and sound recording industries | Census Bureau preliminary SAS data for 2011 and revised SAS data for 2009 and 2010. | PCE price indexes based on BLS CPI. |
| Broadcasting and telecommunications | Census Bureau preliminary SAS data for 2011 and revised SAS data for 2009 and 2010. | BLS PPI. |
| Information and data processing services | Census Bureau preliminary SAS data for 2011 and revised SAS data for 2009 and 2010. | PCE price indexes for information services; BLS PPI for data processing services. |
| Finance and insurance Federal Reserve banks, credit | Foderal Deposit Incurence Corneration commercial heads call report data: Foderal Because | For financial conviges DCE implicit arise deflaters beared |
| intermediation and related activities | Federal Deposit Insurance Corporation commercial bank call report data; Federal Reserve Board (FRB) data; National Credit Union Administration; Office of Thrift Supervision data; BEA measures of financial services; private trade source data for 2009 and 2010. | For financial services, PCE implicit price deflators based on BLS quantity output indexes for commercial banks and employee hours for other depository institutions; BLS PPI and CPI; FRB priced services. |
| Securities, commodity contracts, investments | Securities and Exchange Commission Focus Report for 2011; Census Bureau preliminary SAS data; BLS QCEW data for auxiliary industries. | BLS PPI; PCE price indexes based on BLS CPI and PPI. |
| Insurance carriers and related activities | For property and casualty insurance, life insurance, and reinsurance private trade source data and BLS QCEW data for 2009–2011; for medical and hospitalization insurance, private trade source data and NIPA statistics on medical and hospital insurance premiums for 2009–2011. | BLS PPI; PCE price indexes based on quantity extrapo- lations of property insurance premiums and benefits deflated with BLS CPI, composite input cost indexes for life insurance; quantity extrapolation. |

F. Principal Sources of Data for Industry and Commodity Output and Prices—Table Ends

| Industry and commodity | Source data for annual current-dollar statistics | Source data for price indexes |
|--------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Insurance carriers and related activities | For property and casualty insurance, life insurance, and reinsurance private trade source data and BLS QCEW data for 2009–2011; for medical and hospitalization insurance, private trade source data and NIPA statistics on medical and hospital insurance premiums for 2009–2011. | BLS PPI; PCE price indexes based on quantity extrapo- lations of property insurance premiums and benefits deflated with BLS CPI, composite input cost indexes for life insurance; quantity extrapolation. |
| Funds, trusts, and other financial vehicles | NIPA imputed service charges for other financial institutions and Employee Benefits Security Administration data on pension funds for 2009–2011. | BLS PPI and PCE price indexes based on quantity indexes for mutual funds sales deflator with BLS CPI. |
| Real estate and rental and leasing Real estate | | For recidential dwellings, BCF price index for recidential |
| neal estate | For residential dwellings, NIPA housing data and USDA data on farm housing; for nonresidential dwellings, new Internal Revenue Service (IRS) tabulations of business tax returns for 2009; NIPA rental value of buildings owned by nonprofits and balance of payments exports data. | For residential dwellings, PCE price index for residential rents, NIPA farm rents paid, and BLS CPI based deflator; for nonresidential dwellings, BLS PPI; for real estate managers and agents, BLS PPI and trade source data. |
| Rental and leasing services and lessors of intangible assets | For rental and leasing services, Census Bureau preliminary SAS data for 2011 and revised SAS data for 2009 and 2010; for royalties, new IRS tabulations of business tax returns for 2010 and revised tabulations for 2009. | BLS PPI; BTS and construction index, mining, crude oil, receipts. |
| Professional, scientific, and tech | | |
| Legal services Computer systems design and related services | Census Bureau preliminary SAS data for 2011 and revised SAS data for 2009 and 2010. Census Bureau preliminary SAS data for 2011 and revised SAS data for 2009 and 2010. | BLS PPI; BEA PCE. BEA price indexes for prepackaged custom and own-account software. |
| Miscellaneous professional, scientific and technical services | Census Bureau preliminary SAS data for 2011 and revised SAS data for 2009 and 2010. | BLS PPI; BLS QCEW; BEA [NIPA?] PCE. |
| Management of companies and enterprises | BLS QCEW data for 2009–2011. | BLS QCEW data. |
| Administrative and waste manag | ement services | l |
| Administrative and support services | Census Bureau preliminary SAS data for 2011 and revised SAS data for 2009 and 2010; BLS QCEW data for auxiliary industries. | |
| Waste management and remediation services | Census Bureau preliminary SAS data for 2011 and revised SAS data for 2009 and 2010; BLS QCEW data for auxiliary industries. | |
| Educational services | PCE data for education services based on data from the Department of Education and data from BLS consumer expenditure survey for 2009–2011. | PCE price index based on trade source data for input costs. |
| Health care and social assistance | | DCE price index based on BLS CDI. BLS DDI |
| Ambulatory health care services Hospital and nursing and residential care facilities | Census Bureau preliminary SAS data for 2011 and revised SAS data for 2009 and 2010. Census Bureau preliminary SAS data for 2011 and revised SAS data for 2009 and 2010. | PCE price index based on BLS CPI; BLS PPI. PCE price index based on BLS CPI and Centers for Medicare and Medicaid services. |
| Social assistance | Census Bureau preliminary SAS data for 2011 and revised SAS data for 2009 and 2010. | PCE price index based on trade source data on input costs. |
| Arts, entertainment, and recreation | on | ı |
| Performing arts, spectator sports, museums and related industries | Census Bureau preliminary SAS data for 2011 and revised SAS data for 2009 and 2010. | PCE price index based on BLS CPI. |
| Amusement, gambling, and recreation industries | Census Bureau preliminary SAS data for 2011 and revised SAS data for 2009 and 2010. | PCE price index based on BLS CPI. |
| Accommodation and food service Accommodations | es For hotels and motels, PCE and for RV parks and bed and breakfasts, BLS QCEW data, for 2009–2011. | BLS PPI; PCE price index based on BLS CPI. |
| Food services and drinking places | Census Bureau ARTS data for 2009–2011. | BLS PPI. |
| Other services, except government | For religious, grant making, civic and other nonprofit services, personal services, and dry cleaning services, Census Bureau preliminary SAS data for 2011 and revised data for 2009 and 2010 and data from the National Center for Charitable Statistics; for repair and maintenance, BLS QCEW; for private household services, PCE data. | BLS CPI; PCE price indexes based on BLS CPI. |
| Federal Constant | NIDA government evinenditure etatistics for foderal structures DOD investment | MIDA price index based on DLC DDI and CDI for well- |
| General government | NIPA government expenditure statistics; for federal structures, DOD investment expenditures data for 2009–2011. | NIPA price index based on BLS PPI and CPI; for military facilities, DOD data on employment, prices for military construction and construction cost indexes from trade sources. |
| Government enterprises | U.S. Postal Service receipts; Overseas Private Investment Corporation and Federal Housing Administration data; for electric utilities, EIA data; for specific federal enterprises, government agency data, 2009–2011. | BLS PPI; PCE price indexes based on BLS PPI and agency data. |
| State and local | I | ı |
| General | NIPA government expenditure statistics for 2009–2011. | BLS PPI; PCE price index based on CPI. |
| Enterprises | NIPA statistics on government enterprises based on the Census Bureau annual survey of government finances; for Alaskan ferries, waterports, and airports, Alaska Railroad Administration; for electric utilities, EIA data; for state and local government structures, Census Bureau construction survey for 2009–2011. | BLS PPI. |

| | | Distribution | Industrial distribution |
| Component of gross domestic income | Major source data | available in source data | Data or assumption if distribution is not available |
| Compensation of employees, paid | | | |
| Wages and salary accruals ¹ | For most private industries, federal government civilians, and state and local government, Bureau of Labor Statistics (BLS) tabulations from the quarterly census of employment and wages (QCEW) for 2009–2011; for other private industries, a variety of sources for 2009–2011; for military wages, Office of Personnel Management (OPM) for 2009–2011. | Establishment. | |
| Supplements to wages and salaries | | | ' |
| Employer contributions for employee pension and insurance funds | For health insurance, Department of Health and Human Services medical expenditure panel survey data for 2009–2011; for private pension plans, Pension Benefit Guaranty Corporation and corporate financial data for 2010 and 2011; Department of Labor tabulations of Internal Revenue Service (IRS) Form 5500 for 2009; for federal retirement plans, outlays from the <i>Monthly Treasury Statement</i> ; for state and local government plans, Census Bureau annual survey of state and local government financial data for 2009–2011; for other types of funds, judgmental trend for 2011 and trade association data for 2009 and 2010. | For pension plans, com- pany; for the others, none. | BLS employer cost index; BLS QCEW. |
| Employer contributions for government social insurance | Tabulations from the Social Security Administration (SSA) and other agencies that administer social insurance programs for 2009–2011. | None. | SSA and BLS tabulations. |
| Taxes on production and imports less sub | sidies | ı | ! |
| Taxes on production and imports | For state and local government, Census Bureau data for 2009–2011; for federal government excise taxes, Alcohol and Tobacco Tax and Trade Bureau collections and IRS data for 2009–2011; for customs duties, Treasury Department <i>Monthly Treasury Statement</i> for 2009–2011. | | |
| Subsidies | For federal government, U.S. Department of Agriculture (USDA) Commodity Credit Corporation subsidy payments and Office of Management and Budget (OMB) of the United States for 2009–2011; for state and local government, Census Bureau and California administrative records for 2009–2011. | None. | Payments are assigned to the industries receiving the subsidies. |
| Gross operating surplus | | | |
| Private enterprises | | | |
| Net interest and miscellaneous payments | | | |
| Corporate | Federal Financial Institutions Examination Council (FFIEC) Call Reports data on commercial banks and trade association data for 2009–2011; for 2009 and 2010, IRS tabulations from corporate tax returns (Form 1120 series), adjusted for misreporting on tax returns and for conceptual differences. | Company. | Census Bureau company- establishment employ- ment matrix. |
| Noncorporate | FFIEC Call Reports data on commercial banks, Federal Reserve Board (FRB) mortgage debt times BEA interest rate for residential mortgage interest for 2009–2011; for 2009 and 2010, IRS tabulations of tax return data from sole proprietorships (Form 1040 Schedule C) and partnerships (Form 1065), adjusted for misreporting on tax returns and for conceptual differences. | Company. | Assumed to be equivalent to an establishment distribution. |
| Business current transfer payments (net) | For government, OMB <i>Budget of the United States</i> , Census Bureau Census of Governments and annual surveys for 2009–2011; for persons, judgmental trend for 2009 and for 2009 and 2010, IRS tabulations from business tax returns and information from government agency reports and trade sources. | Company. | Industry-specific pay- ments are assigned to the industries; others are based on IRS company industry distribution. |
| Proprietors' income with inventory valuat | on adjustment (IVA) and without capital consumption adjustment (CCAdj) | l | , |
| Farm Nonfarm | USDA farm income data for 2009–2011. | Establishment. | |
| Proprietors' income without inventory valuation and capital consumption adjustments | Indicators of activity, such as construction spending (value put in place) for construction, trade, and services for 2011. For others, judgmental trend for 2011 and for 2009 and 2010, IRS tabulations of tax returns from sole proprietorships (Form 1040 Schedule C) and partnerships (Form 1065), adjusted for misreporting on tax returns and for conceptual differences. | Company. | Assumed to be equivalent to an establishment distribution. |
| Inventory valuation adjustment | BLS prices for 2009–2011; Census Bureau monthly surveys and <i>Quarterly Financial Report</i> for 2011; IRS inventory data for 2009 and 2010. | Establishment/company. | |

^{1.} Includes wage and salary disbursements to the rest of the world and excludes wages and salaries received from the rest of the world.

G. Principal Sources of Data for Value-Added Extrapolators—Table Ends

| | | | Industrial distribution |
|----------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------|-----------------------------------------------------------------|
| Component of gross domestic income | Major source data | Distribution available in source data | Data or assumption if distribution is not available |
| Proprietors' income with inventory valuati | ion adjustment (IVA) and without capital consumption adjustment (CCAdj) | | |
| Farm Nonfarm | USDA farm income data for 2009–2011. | Establishment. | |
| Proprietors' income without inventory valuation and capital consumption adjustments | Indicators of activity, such as construction spending (value put in place) for construction, trade, and services for 2011. For others, judgmental trend for 2011 and for 2009 and 2010, IRS tabulations of tax returns from sole proprietorships (Form 1040 Schedule C) and partnerships (Form 1065), adjusted for misreporting on tax returns and for conceptual differences. | Company. | Assumed to be equivalent to an establishment distribution. |
| Rental income of persons without capital consumption adjustment | Census Bureau data on housing units and rents from the American Housing Survey, FRB mort- gage debt data, BEA interest rate data, and USDA data for 2009–2011; for royalties, judgmen- tal trend for 2011 and for 2009 and 2010, IRS tabulations of data from individual tax returns (Form 1040). | Establishment. | |
| Corporate profits before tax with inventor | y valuation adjustment and without capital consumption adjustment, domestic industries | I | |
| Corporate profits before tax without inventory valuation and capital consumption adjustments | Census Bureau data from the <i>Quarterly Financial Report</i> , regulatory agency reports, and public financial statements for 2011; for 2009 and 2010, IRS tabulations from corporate tax returns (Form 1120 series), adjusted for misreporting on tax returns and for conceptual differences. | Company. | Census Bureau company- establishment employ- ment matrix. |
| Inventory valuation adjustment | BLS prices for 2009–2011; for 2011, Census Bureau monthly surveys and <i>Quarterly Financial Report</i> ; for 2009 and 2010, IRS inventory data. | Establishment/ company. | |
| Capital consumption allowances | | | |
| Corporate | BEA estimates of tax-return-based depreciation for 2011; for 2009 and 2010, IRS tabulations from corporate tax returns (Form 1120 series), adjusted for misreporting on tax returns and for conceptual differences. | Company. | Census Bureau company- establishment employ- ment matrix. |
| Noncorporate | BEA estimates of tax-return-based depreciation for 2011; for 2009 and 2010, IRS tabulations of tax return data from sole proprietorships (Form 1040 Schedule C) and partnerships (Form 1065), adjusted for misreporting on tax returns and for conceptual differences. | Company. | Assumed to be equivalent to an establishment distribution. |
| Current surplus of government enterprises | For federal government, reports from various agencies and BEA consumption of fixed capital for 2009–2011; for state and local governments, Census Bureau surveys of government finances for 2009–2011. | Establishment. | |
| Consumption of fixed capital | | I | |
| Households and institutions ² | Perpetual-inventory method, base on gross investment estimates and on investment prices for 2009–2011. | Establishment. | |
| Government | Perpetual-inventory method, base on gross investment estimates and on investment prices for 2009–2011. | Type of agency. | |

^{2.} Consists of owner-occupied housing and non profit institutions primarily serving households.

The NIPA reconciliation item shows the differences between the Annual Industry Accounts (AIAs) and the National Income and Product Accounts (NIPAs) that result from the incorporation of source data in the AIAs that were not available to be incorporated in the NIPAs. These differences do not indicate future revisions to the NIPAs, which will reflect the incorporation of additional key source data.
 Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

^{3.} Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.
4. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

Table 2. Value Added by Industry as a Percentage of Gross Domestic Product, 2008–2011

The NIPA reconciliation item shows the differences between the Annual Industry Accounts (AIAs) and the National Income and Product Accounts (NIPAs) that result from the incorporation of source data in the AIAs that were not available to be incorporated in the NIPAs. These differences do not indicate future revisions to the NIPAs, which will reflect the incorporation of additional key source data.
 Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

^{3.} Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.
4. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

tance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

3. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.
 Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance.

Table 4. Real Value Added by Industry, 2008–2011

[Billions of chained (2005) dollars]

^{1.} Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The value of the "Not allocated by industry" line reflects the difference between the first line and the sum of the most detailed lines, as well as the differences in source data used to estimate GDP by industry and the expenditures measure of real GDP.

2. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

^{3.} Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services, and other services, except government.
4. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

December 2012 D-93

Appendixes

A. Additional Information About the NIPA Estimates

Statistical Conventions

Current-dollar GDP is a measure of the market value of goods, services, and structures that are produced in the economy in a particular period. The changes in current-dollar GDP can be decomposed into quantity and price components. Quantities, or "real" measures, and prices are expressed as index numbers with the reference year—at present, the year 2005—equal to 100.¹

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP for 2006-2007 uses prices for 2006 and 2007 as weights, and the 2006-2007 annual percent change in the GDP price index uses quantities for 2006 and 2007 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. These annual changes are "chained" (multiplied) together to form time series of quantity and price indexes. The percent changes in the Fisher indexes are not affected by the choice of the reference year.

BEA also publishes implicit price deflators (IPDs), which are calculated as the ratio of the current-dollar value of a component to the chained-dollar value of the component, multiplied by 100. The values of an IPD are very close to the values of the corresponding "chain-type" price index.

The measures of real GDP and its major components are also presented in dollar-denominated form, designated "chained (2005) dollar estimates." For most series, these estimates are computed by multiplying the current-dollar value in 2005 by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 2005 and if real output for this component increased by 10 percent in 2006, then the chained (2005) dollar value of this component in 2006 would be \$110 ($$100 \times 1.10$). The percent changes calculated from the chained (2005) dollar estimates and from the quantity indexes are the same; any differences will be small and due to rounding.

The chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP (or to any intermediate aggregate) in a table, because the relative prices that are used as weights for any period other than the reference year differ from those of the reference year. A measure of the effect of such

differences is provided by a "residual" line—the difference between the chained-dollar value of the main aggregate in the table and the sum of the most detailed components in the table. For periods close to the reference year, when the relative prices that are used as weights have usually not changed much, the residuals tend to be small, and the chained-dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. For periods further from the reference year, the residuals tend to be larger, and the chained-dollar estimates are less useful for analyses of contributions to growth. In particular, for components for which relative prices are changing rapidly, the calculation of contributions based on chained-dollar estimates may be misleading even just a few years from the reference year. Thus, contributions derived from quantity indexes provide a better measure than contributions derived from chained-dollar estimates; contributions based on quantity indexes are shown in selected NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, and 5.3.2.

For quarters and months, NIPA estimates are presented at annual rates, which show the value that would be registered if the rate of activity that is measured for a quarter or for a month were maintained for a full year. Annual rates are used so that periods of different lengths—for example, quarters and years—may be more easily compared. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

For most quarterly NIPA estimates, *percent changes* in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[\left(\frac{x_t}{x_0} \right)^{m/n} - 1 \right] \times 100$$

where r is the percent change at an annual rate; x_t is the level of activity in the later period; x_0 is the level of activity in the earlier period; m is the periodicity of the data (for example, 1 for annual data, 4 for quarterly data, or 12 for monthly data); and n is the number of periods between the earlier periods and the later periods (that is, t-0).

Quarterly and monthly NIPA estimates are seasonally adjusted if necessary. Seasonal adjustment removes from the time series the average effects of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

BEA Current and Historical Data

A selection of estimates from the national, industry, international, and regional accounts of the Bureau of Economic Analysis (BEA) are presented in this section. BEA's estimates are not copyrighted and may be reprinted without BEA's permission. Citing the Survey of Current Business and BEA as the source is appreciated.

More detailed estimates from BEA's accounts are available on BEA's Web site at www.bea.gov. These estimates are available in a variety of formats. In addition, news releases, articles, and other information, including methodologies and working papers, are available.

The tables present annual [A], quarterly [Q], and monthly [M] data.

D-2 December 2012

National Data

A. Selected NIPA Tables

The selected set of NIPA tables presents the most recent estimates of gross domestic product (GDP) and its components, which were released on November 29, 2012. These estimates include the second estimates for the third quarter of 2012. Also included are revised estimates of wages and salaries and of affected income-side series for the second quarter of 2012.

The selected set presents quarterly estimates that are updated monthly. Annual estimates are presented in most of the tables. Estimates for all NIPA series for 1929 forward are on BEA's Web site at www.bea.gov.

The GDP news release is available on BEA's Web site within minutes after the release. To receive an e-mail notification of the release, go to www.bea.gov and subscribe. The "Selected NIPA Tables" are available later that day.

NoTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).
 Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.
 Some components of final sales of computers include computer parts.

Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.
 Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Nore. Percent changes for real estimates are calculated from corresponding quantity indexes presented in NIPA tables 1.1.3, 1.2.3, 1.4.3, and 1.7.3. Percent changes in price estimates are calculated from corresponding price indexes presented in NIPA tables 1.1.4, 1.6.4, and 2.3.4.

^{1.} Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

Note. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of domestic product and of change in private inventories; the residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

Equals gross domestic product excluding gross value added of households and institutions and of general government.
 Equals gross domestic business value added excluding gross farm value added.
 Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied houseing owned by nonprofit institutions.
 Equals compensation of general government employees plus general government consumption of fixed capital.

Note. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

ment.

2. Equals gross domestic business value added excluding gross farm value added.

3. Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.

4. Equals compensation of general government employees plus general government consumption of fixed capital.

Nors. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
 Sexcludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
 Excludes software "embedded," or bundled, in computers and other equipment.

Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
 Sexcludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
 A. Excludes software "embedded," or bundled, in computers and other equipment.

Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
 Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
 Excludes software "embedded," or bundled, in computers and other equipment.

Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

| Gross investment | | 338.2 | 319.7 | 318.3 | 321.3 | 315.5 | 317.5 | 316.1 |

Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
 Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
 Excludes software "embedded," or bundled, in computers and other equipment.

^{1.} Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 1.5.2 and real growth rates are shown in table 1.5.1.
5. Excludes software "embedded," or bundled, in computers and other equipment.
Note. The residual line is the difference between the first line and the sum of the most detailed lines.

^{1.} Gross domestic income deflated by the implicit price deflator for gross domestic product.
2. Gross national income deflated by the implicit price deflator for gross national product.
3. Net domestic income deflated by the implicit price deflator for gross national product.
NoTE. Except as noted in footnotes 1, 2 and 3, chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Deflator is the gross domestic purchases price index.
 This measure is called "real gross domestic income" in the System of National Accounts, 2008.
 This measure is called "real gross national income" in the System of National Accounts, 2008.
 Deflator is the net domestic purchases price index.

Uses gross domestic purchases price index as deflator.
 This measure is called "real gross domestic income" in the System of National Accounts, 2008.
 This measure is called "real gross national income" in the System of National Accounts, 2008.
 Uses net domestic purchases price index as deflator.
 Ratio (multiplied by 100) of price index for gross domestic product to the price index for gross domestic purchases.

Ratio (multiplied by 100) of the price index for exports of goods and services to the price index for imports of goods and services.
 Ratio (multiplied by 100) of the price index for goods exports to the price index for goods imports.
 Ratio (multiplied by 100) of the price index for goods exports to the price index for nonpetroleum goods imports.

Estimates for financial corporate business and nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

3. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100.

4. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

^{1.} The implicit price deflator for gross value added of nonfinancial corporate business divided by 100. Estimates for nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

Nore: The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

IVA Inventory valuation adjustment

CCAdj Capital consumption adjustment

In this table, the net measures are the corresponding gross measures less the depreciation of fixed assets as measured by the consumption of fixed capital.
 Equals gross domestic purchases less change in private inventories.
 The command-basis estimates (lines 10-13) measure the purchasing power of the income generated by the sale of goods and services produced; they reflect gains or losses in real income resulting from changes in the terms of trade for exports and imports. For more detail on the command-basis measures, see NIPA tables 1.8.3 and 1.8.6.

In this table, net measures are the corresponding gross measures less the depreciation of fixed assets as measured by the consumption of fixed capital.
 Equals gross domestic purchases less change in private inventories.
 The command-basis estimates (lines 10-13) measure the purchasing power of the income generated by the sale of goods and services produced; they reflect gains or losses in real income resulting from changes in the terms of trade for exports and imports. For more detail on the command-basis estimates, see NIPA tables 1.8.3 and 1.8.6.

^{1.} Social security benefits include old-age, survivors, and disability insurance benefits that are distributed from the federal old-age and survivors insurance trust fund and the disability insurance trust fund.

2. Medicare benefits include hospital and supplementary medical insurance benefits that are distributed from the federal hospital insurance trust fund and the supplementary medical insurance trust fund.

3. Consists of nonmortgage interest paid by households.

4. The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.

Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
 Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
 Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
 Consists of gasoline and other energy goods and of electricity and gas services.
 Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

^{1.} Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
5. Consists of gasoline and other energy goods and of electricity and gas services.
6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
 Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
 Food consists of load and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
 Consists of gasoline and other energy goods and of electricity and gas services.
 Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
 Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
 Food consists of load and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
 Consists of gasoline and other energy goods and of electricity and gas.
 Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

^{1.} Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
5. Consists of gasoline and other energy goods and of electricity and gas.
6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Note: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

^{1.} Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account

investment (construction and software).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

ment that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Note: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account

investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

^{1.} Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

^{1.} Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

Inlesse assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

Note: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

^{1.} National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.
5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
 Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
 Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
 Includes general government intermediate inputs for goods and services sold to other sectors and for own-account

Investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.
5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and

^{4.} Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.
5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.
Note. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

^{1.} Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. Consists of capital transfers and the acquisition and disposal of nonproduced nonfinancial assets. Prior to 1982, reflects only capital grants paid to the U.S. territories and the Commonwealths of Puerto Rico and Northern Mariana Islands.

^{1.} Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to

services.

2. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

are included in services. Beginning with 1986, repairs and alterations of equipment are replassing from 5000 to services.

2. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 4.2.2 and real growth rates are shown in table 4.2.1.

3. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable accuratemative consumer nonds.

^{3.} Includes parts of todos, teeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonauthomotive consumer goods.
Note: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. For exports and for imports, the residual line is the difference between the aggregate line and the sum of the most detailed lines.

5. Saving and Investment

Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
 Excludes software "embedded," or bundled, in computers and other equipment.
 Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
 Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oiffield machinery, service industry machinery, and electrical equipment not elsewhere classified.
 Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.
 Excludes net purchases of used structures and brokers' commissions on the sale of structures.

- Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
 Excludes software "embedded," or bundled, in computers and other equipment.
 Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
 Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oiffield machinery, service industry machinery, and electrical equipment not elsewhere classified.
 Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.
 Excludes net purchases of used structures and brokers' commissions on the sale of structures.

| Residential structures | 29 | 269.4 | 263.2 | 260.8 | 270.3 | 283.8 | 285.6 | 294.8 |

^{1.} Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.3.2 and real growth rates are shown in table 5.3.1.

3. Excludes software 'embedded,' or bundled, in computers and other equipment.

4. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

5. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

6. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

7. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

Note: Chained (2005) dollar series are calculated as the product of the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

^{1.} This series is derived from the Census Bureau series "current cost inventories."
2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out) and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

Nore. Estimates in this table are based on the North American Industry Classification System (NAICS).
Chained (2005) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

| Nonfarm inventories to final sales of goods and structures | | 4.58 | 4.57 | 4.58 | 4.51 | 4.52 |

^{1.} Inventories are as of the end of the quarter. The quarter to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of obmestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

| Nonfarm inventories to final sales | 29 | 2.12 | 2.13 | 2.13 | 2.14 | 2.16 |
| Nonfarm inventories to final sales of goods and structures | 30 | 3.94 | 3.92 | 3.90 | 3.91 | 3.93 |

^{1.} Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

Norz. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2005) dollar inventory series are calculated to ensure that the chained (2005) dollar change in inventories for 2005 equals the current-dollar change in inventories for 2005 and that the average of the 2004 and 2005 end-of-year chain-weighted and fixed-weighted inventories are equal.

Consists of used light trucks only.
 Consists of final sales and change in private inventories of new autos assembled in the United States.
 Consists of sales of imported new autos in personal consumption expenditures, in private fixed investment, and in gross government investment.

Consists of used light trucks only.
 Consists of final sales and change in private inventories of new autos assembled in the United States.
 Consists of sales of imported new autos in personal consumption expenditures, in private fixed investment, and in gross government investment.
 Nors. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

1. Social security benefits include old-age, survivors, and disability insurance benefits that are distributed
from the federal old-age and survivors insurance trust fund and the disability insurance trust fund.

Medicare benefits include hospital and supplementary medical insurance benefits that are distributed from the federal hospital insurance trust fund and the supplementary medical insurance trust fund.

Consists of nonmortgage interest paid by households.
 Equals disposable personal income deflated by the implicit price deflator for personal consumption expenditures.

^{5.} Population is the total population of the United States, including the Armed Forces overseas and the instist. Population is the local population. The monthly estimate is the average of estimates for the first of the month and the first of the following month; the annual estimate is the average of the monthly estimates.

C. Historical Measures

This table is derived from the "Selected NIPA Tables" that are published in this issue and from the "GDP and Other Major NIPA Series" tables that were published in the August 2012 issue. (The changes in prices are calculated from indexes expressed to three decimal places.)

Table C.1. GDP and Other Major NIPA Aggregates—Continues

December 2012 D-59

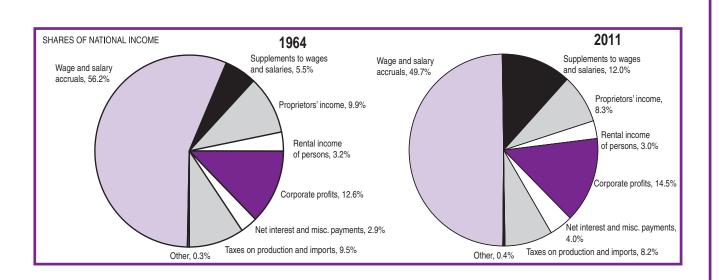

D. Charts

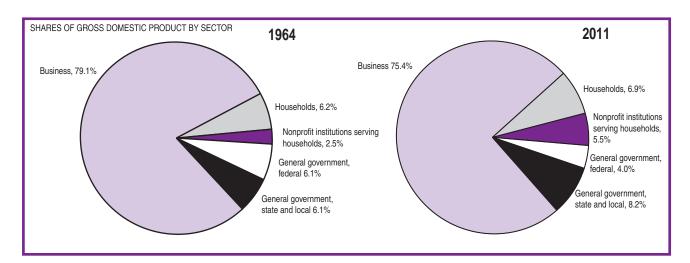

All series are seasonally adjusted at annual rates. The percent changes in real gross domestic product are based on quarter-to-quarter changes. The shaded areas mark the beginning and end of recessions as determined by the Business Cycle Dating Committee of the National Bureau of Economic Research.

p Preliminary r Revised

1. Reflects adjustments necessary to bring Census Bureau data in line with the concepts and definitions used by BEA

to prepare the international and national accounts.
2. Contains goods that cannot be separately identified.

p Preliminary
r Revised
1. Royalties and license fees and "other private services" by detailed type of service include both affiliated and unaffiliated transactions.
2. Includes royalties, license fees, and other fees associated with intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.

Includes royalties, license fees, and other fees associated with copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intellectual property rights.
 4. Other services receipts (exports) include mainly film and television tape rentals and expenditures of foreign residents temporarily working in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.
 5. These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers.

- 5. Reflects changes in the value of the official gold stock due to fluctuations in the market price of gold.
 6. Reflects changes in gold stock from U.S. Treasury sales of gold medallions and commemorative and bullion coins; also reflects replenishment through open market purchases. These demonetizations/monetizations are not included in international transactions financial flows.

- international transactions financial flows.

 7. Also includes paid-in capital subscriptions to international financial institutions and outstanding amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.

 8. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

 9. Includes foreign-currency-denominated assets obtained through temporary reciprocal currency arrangements between the Federal Reserve System and foreign central banks. These assets are included in the investment position at the dollar value established at the time they were received, reflecting the valuation of these assets in the Federal Reserve Systems balance sheet. The movement of exchange rates does not affect this valuation.

 10. Includes U.S. government liabilities associated with military sales contracts and U.S. government reserve-related liabilities from allocations of special drawing rights (SDRs).

p Preliminary r Revised * Less than \$500,000 (+/-)

^{..} Not applicable

Nepresents gains or losses on foreign-currency-denominated assets and liabilities due to their revaluation at current exchange rates.
 Includes changes due to year-to-year shifts in the composition of reporting panels, primarily for bank and nonbank

estimates, and to the incorporation of more comprehensive survey results. Also includes capital gains and losses of direct investment affiliates and changes in positions that cannot be allocated to financial flows, price changes, or exchange-rate changes.

3. Financial flows and valuation adjustments for financial derivatives are available only on a net basis, which is shown

on line 2; they are not separately available for gross positive fair values and gross negative fair values of financial deriva-tives. Consequently, columns (a) through (d) on lines 4, 5, 24, and 25 are not available.

4. Data are not separately available for the three types of valuation adjustments; therefore, the sum of all three types is

shown in column (d).

Regional Data

I. State and Regional Tables

The tables in this section include the most recent estimates of state personal income and gross domestic product by state. The sources of these estimates are noted.

The quarterly and annual estimates of state personal income and the estimates of gross domestic product by state are available online at www.bea.gov. For information on state personal income, e-mail reis@bea.gov; write to the Regional Economic Information System, BE-55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5360. For information on gross domestic product by state, e-mail gdpbystate@bea.gov; write to the Regional Product Division, BE-61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5340.

p Preliminary r Revised

1. Percent change from preceding period was calculated from unrounded data.

Nore. The personal income level shown for the United States is derived as the sum of the state estimates. It differs

from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and the timing of the availability of source data.

Source: Table 1 in the "Regional Quarterly Report" in the October 2012 SURVEY OF CURRENT BUSINESS

from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and the timing of the availability of source data.

Source: Table 2 in the "Regional Quarterly Report" in the October 2012 SURVEY OF CURRENT BUSINESS

r Revised

1. Percent change was calculated from unrounded data.

Noτε. The personal income level shown for the United States is derived as the sum of the state estimates. It differs

from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and the timing of the availability of source data.

Source: Table 3 in the "Regional Quarterly Report" in the October 2012 SURVEY OF CURRENT BUSINESS

r Revised
1. Percent change was calculated from unrounded data.

Noτε. The personal income level shown for the United States is derived as the sum of the state estimates. It differs

Table I.4. Gross Domestic Product (GDP) by State for Industries, 2011

Note. Totals shown for the United States differ from the national income and product account statistics of gross domestic product (GDP) because GDP by state excludes and national GDP includes the compensation of federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad

and for military equipment, except office equipment. Also, GDP by state and national GDP have different revision schedules.

Source: This table reflects the GDP by state statistics for 2011 that were released on June 5, 2012.

D-82 December 2012

Per capita personal income was computed using Census Bureau midyear population estimates.
 Percent change was calculated from unrounded data.
 The personal income level shown for the United States is derived as the sum of the county estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the

timing of the availability of source data.

4. The metropolitan area definitions used by BEA for its personal income estimates are the county-based definitions issued by the Office of Management and Budget in June 2003 (with revisions released February 2004, March 2005, December 2006, November 2007, November 2008, and December 2009) for federal statistical purposes.

Table J.2. Gross Domestic Product by Metropolitan Area for Industries, 2010—Continues [Millions of dollars]

| Metropolitan area | Rank of total GDP by metropolitan area | Total | Natural resources and mining | Con- struction | Durable- goods manu- facturing | Nondurable- goods manu- facturing | Trade | Transportation and utilities | Infor- mation | Financial activities | Pro- fessional and business services | Education and health services | Leisure and hospitality | Other services | Government |

A. Additional Information About the NIPA Estimates

Statistical Conventions

Current-dollar GDP is a measure of the market value of goods, services, and structures that are produced in the economy in a particular period. The changes in current-dollar GDP can be decomposed into quantity and price components. Quantities, or "real" measures, and prices are expressed as index numbers with the reference year—at present, the year 2005—equal to 100.¹

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP for 2006-2007 uses prices for 2006 and 2007 as weights, and the 2006-2007 annual percent change in the GDP price index uses quantities for 2006 and 2007 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. These annual changes are "chained" (multiplied) together to form time series of quantity and price indexes. The percent changes in the Fisher indexes are not affected by the choice of the reference year.

BEA also publishes implicit price deflators (IPDs), which are calculated as the ratio of the current-dollar value of a component to the chained-dollar value of the component, multiplied by 100. The values of an IPD are very close to the values of the corresponding "chain-type" price index.

The measures of real GDP and its major components are also presented in dollar-denominated form, designated "chained (2005) dollar estimates." For most series, these estimates are computed by multiplying the current-dollar value in 2005 by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 2005 and if real output for this component increased by 10 percent in 2006, then the chained (2005) dollar value of this component in 2006 would be \$110 ($$100 \times 1.10$). The percent changes calculated from the chained (2005) dollar estimates and from the quantity indexes are the same; any differences will be small and due to rounding.

The chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP (or to any intermediate aggregate) in a table, because the relative prices that are used as weights for any period other than the reference year differ from those of the reference year. A measure of the effect of such

differences is provided by a "residual" line—the difference between the chained-dollar value of the main aggregate in the table and the sum of the most detailed components in the table. For periods close to the reference year, when the relative prices that are used as weights have usually not changed much, the residuals tend to be small, and the chained-dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. For periods further from the reference year, the residuals tend to be larger, and the chained-dollar estimates are less useful for analyses of contributions to growth. In particular, for components for which relative prices are changing rapidly, the calculation of contributions based on chained-dollar estimates may be misleading even just a few years from the reference year. Thus, contributions derived from quantity indexes provide a better measure than contributions derived from chained-dollar estimates; contributions based on quantity indexes are shown in selected NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, and 5.3.2.

For quarters and months, NIPA estimates are presented at annual rates, which show the value that would be registered if the rate of activity that is measured for a quarter or for a month were maintained for a full year. Annual rates are used so that periods of different lengths—for example, quarters and years—may be more easily compared. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

For most quarterly NIPA estimates, *percent changes* in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[\left(\frac{x_t}{x_0} \right)^{m/n} - 1 \right] \times 100$$

where r is the percent change at an annual rate; x_t is the level of activity in the later period; x_0 is the level of activity in the earlier period; m is the periodicity of the data (for example, 1 for annual data, 4 for quarterly data, or 12 for monthly data); and n is the number of periods between the earlier periods and the later periods (that is, t-0).

Quarterly and monthly NIPA estimates are seasonally adjusted if necessary. Seasonal adjustment removes from the time series the average effects of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

B. Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, industry, international, and regional accounts. Most of this information is available on BEA's Web site at www.bea.gov.

National accounts

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product) and the estimates of fixed assets and consumer durable goods.

National income and product accounts (NIPAs). The chapters in *Concepts and Methods of the U.S. National Income and Product Accounts* document the conceptual framework of the NIPAs and the methodologies that are used to prepare the estimates. The chapters have been updated to reflect the 2012 annual NIPA revision.

"Introductory Chapters 1–4: Concepts, Source Data, and Estimating Methods"

"Chapter 5: Personal Consumption Expenditures"

"Chapter 6: Private Fixed Investment"

"Chapter 7: Change in Private Inventories"

"Chapter 8: Net Exports of Goods and Services"

"Chapter 9: Government Consumption Expenditures and Gross Investment"

"Chapter 10: Compensation of Employees"

"Chapter 13: Corporate Profits"

An Introduction to National Income and Product Accounts (2007)

Measuring the Economy: A Primer on GDP and the National Income and Product Accounts (2007)

The following Survey articles describe the 2009 comprehensive revision of the NIPAs.

"Initial Results of the 2009 Comprehensive NIPA Revision" (August 2009)

"Improved Estimates of the National Income and Product Accounts: Results of the 2009 Comprehensive Revision" (September 2009)

"Preview of the Revised NIPA Estimates for 2002: Effects of Incorporating the 2002 Benchmark I-O Accounts and Proposed Definition and Statistical Changes" (March 2008)

In addition, see the following articles.

"Annual Revision of the National Income and Product Accounts" (August 2012) presents revisions and describes any changes in the data and the methods used to prepare the estimates.

"Updated Summary of NIPA Methodologies" (November 2012) describes the source data and methods that are used to prepare the estimates.

"Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes" (November 2003) discusses the advantages of using chain-weighted indexes and the challenges of using chained dollars.

"Revisions to GDP, GDI, and Their Major Components" (July 2011) evaluates the principal NIPA estimates by examining the record of revisions to them.

Fixed assets and consumer durable goods. Fixed Assets and Consumer Durable Goods in the United States, 1925–97 (2003) discusses the concepts and statistical considerations that underlie the estimates and their derivation.

"Fixed Assets and Consumer Durable Goods for 1997–2010" (September 2011) describes the improvements that were incorporated into these estimates as part of the 2011 annual NIPA revision.

Satellite account. This account extends the analytical capacity of the NIPAs by focusing on the effects of a particular aspect of economic activity on GDP.

"Research and Development Satellite Account"

For 1959–2002 (December 2006)

For 1959–2004 (October 2007)

For 1959–2007 (December 2010)

Mission Statement and Strategic Plan

The mission statement of the Bureau of Economic Analysis and its most recently updated strategic plan for improving the accuracy, reliability, and relevance of the national, industry, regional, and international accounts are available on BEA's Web site at www.bea.gov under "About BEA."

Industry accounts

The industry accounts consist of the annual industry accounts (the input-output accounts and the gross domestic product by industry accounts), the benchmark input-output accounts, and two satellite accounts.

Annual industry accounts. Measuring the Nation's Economy: An Industry Perspective (2011) provides an overview of these accounts and how they can be used to examine industry activity in the U.S. economy and to track the flow of goods and services throughout the economy.

Benchmark input-output accounts. *Concepts and Methods of the U.S. Input-Output Accounts* (September 2006) describes the concepts and methods that underlie the preparation of these accounts.

Satellite accounts. These accounts extend the analytical capacity of the input-output accounts by focusing on a particular aspect of economic activity.

"U.S. Travel and Tourism Satellite Accounts"

For 2005–2008 (June 2009)

For 2004–2009 (November 2010)

For 2007–2010 (June 2011)

For 2003–2011 (June 2012)

International accounts

The international accounts encompass the international transactions accounts and the international investment position accounts, direct investment, and international transactions in services.

International transactions accounts and international investment position accounts. "A Guide to the U.S. International Transactions Accounts and the U.S. International Investment Position Accounts" (February 2010) introduces these accounts.

U.S. International Transactions Accounts: Concepts and Estimation Methods (2011) describes the methodologies used to prepare the estimates. The methodology is usually updated and improved as part of the annual revisions of the international transactions accounts. The updated and improved methodology is described in a series of articles, the latest of which was published in the July 2012 Survey.

"Modernizing and Enhancing BEA's International Economic Accounts: A Progress Report" (May 2012) updates BEA's plans to introduce the new international statistical standards from recently updated manuals and its plans for changes that were included in the 2011 annual revision.

Direct investment. Updated methodologies are

available in U.S. Direct Investment Abroad: Final Results From the 2004 Benchmark Survey (2008) and in Foreign Direct Investment in the United States: Final Results From the 2002 Benchmark Survey (2006).

Additional improvements are described in the following annual articles: "Direct Investment Positions: Country and Industry Detail" (July) and "Operations of U.S. Multinational Companies" (November 2011) and "Operations of U.S. Affiliates of Foreign Companies" (August 2012).

International services. The methodology used to prepare the estimates is usually updated and improved in a series of articles, the latest of which was published in the October 2012 Survey.

"Selected Issues in the Measurement of U.S. International Services" (June 2002) describes key issues in defining and measuring insurance, wholesale and retail trade, finance, construction, and utilities services.

Regional accounts

The regional accounts include estimates of personal income and gross domestic product.

Personal income. Estimates of personal income are prepared for states and for local areas.

State Personal Income and Employment (2011) describes the detailed methodology that is used to prepare the quarterly and annual estimates for the states, the District of Columbia, the eight BEA regions, and the United States.

Local Area Personal Income and Employment (2011) describes the detailed methodology that is used to prepare the estimates for counties, metropolitan areas, metropolitan divisions, micropolitan areas, combined statistical areas, and BEA economic areas and regions.

Gross domestic product. Estimates of gross domestic product (GDP) are prepared for states and metropolitan areas.

Gross Domestic Product by State (2006) describes the sources and the methods that are used to prepare the estimates.

"Gross Domestic Product by State" (December 2010) presents the results of the most recent comprehensive revision.

"Introducing New Measures of the Metropolitan Economy: Prototype Estimates of GDP by Metropolitan Area" (November 2007) describes the potential uses of the estimates.
